Amy this is a summary of the modifications Croda requests to Permit AQM-003/00426 - Renewal 2. Please contact me if there are any questions.

- Delete Condition 3 – Table 1 a. from the permit. Croda is in the process of demolishing Boiler #1.
- Condition 1 a. Page 4 the Emission Unit Description for EU 3 & 4 should read "Blend Tank Area – **Two** Blend Tanks,....".
- Condition 1 a. Page 4 the Emission Unit Description for EU 14 should include the 3A autoclave hotwell.
- Condition 1 a. Page 4 the Emission Unit Description for EU 31 through EU 35 should read "Unloading Station Tanks".
- Condition 1 a. Page 4 the Emission Units for MP1EU 18 & 19 should refer to a third vacuum pump. Perhaps MP1EU 20. Note there is a discrepancy between the designation of the emission points in the table on page 4 and how the points are described on page 51 Condition 3 – Table 1 k.
- Condition 3 Table 1 a. 2. vi. B. Page 20 should refer to Condition 3 - Table 1(o)**(4)** not Table 1(o)(3) as written.
- Condition 3 Table 1 b. 2. vii. A. Page 24 should refer to Condition 3 - Table 1(o)**(4)** not Table 1(o)(3) as written.
- Condition 3 Table 1 c. 2. vii. A. Page 27 should refer to Condition 3 - Table 1(o)**(4)** not Table 1(o)(3) as written.
- Condition 3 Table 1 h. 1. iv. D. 1. Page 43 should read "The pressure drop across the scrubber shall be less than 19 inches water gauge."
- Delete Condition 3 Table 1 i. 1. vi. C. Page 46. The spray condenser on 7 kettle operates at atmospheric conditions with no packing or other means of creating a pressure drop so monitoring of pressure drop is not a meaningful measure of its operation.
- Delete Condition 3 Table 1 j. 1. vi. C. Page 49. The spray condenser on 4 kettle also operates at atmospheric conditions with no packing or other means of creating a pressure drop so monitoring of pressure drop is not a meaningful measure of its operation.
- Condition 3 Table 1 l. 1. i. B. Page 55 please delete Multi-Purpose Plant and insert Unloading Station Tanks.
- Condition 3 Table 1 m.1.vi.C. Page 56 please delete the words "...and kettles." The oxide detection system does not involve the kettles.
- Condition 3 Appendix "A" Page 73 Multi-Purpose Plant Insignificant sources. The first item should read Three vacuum pumps.

In addition, Croda requests that the General Emission Limitation from APC-2004/0723 for Oxides of Sulfur not to exceed 0.1 ton per 12-month rolling period be transferred to AQM-003/00426 – Renewal 2.

In addition, Croda requests that the Emission Limitation from APC-2004/0723 for Carbon Monoxide of 34.0 pounds per batch for the 'Kettles Area' be transferred to AQM-003/00426 – Renewal 2 and while we request 34.0 pounds per batch be retained for 7 kettle the emission the limitation for 4 kettle may be reduced to 30.0 pounds per batch.
