Subject: Aquatic Vegetation of Delawares Public Ponds F70 (2003-2008)

Detailed vegetation maps of Delaware's state-owned ponds have recently been completed by Jared Jacobini and Cathy Martin of the Division of Fish & Wildlife's Fisheries Section. The ponds are grouped by watershed and each pond folder contains two items, a text document describing all of the plant species found and a pdf map with the locations of the most abundant and also the rarest plants. It can be found on the DFW intranet, click on "State and Federal Aid Performance Reports (on left side of page), then "Misc Federal Aid Fisheries Reports", and "Aquatic Vegetation of Delaware's Public Ponds" or click on the link below:
