

Comments at the public hearing

MS. ROE: Amy Roe from Newark.

My comments are my own. They don't reflect an environmental organization. I'm very happy to see this come forward. I think that updating the regional greenhouse gas initiative is very important, so I applaud the Department for doing that. I do, however, have a request, and that is in Section 1.2.1 it talks about the threshold size for a budget unit at 25 megawatts and at a budget source, and I would like -- it's written 25 megawatts is the threshold size of nameplate capacity. I would like the Department to consider cumulative units on single parcel that equal 25 megawatts to be a budget unit as part of the regulations. Does that make sense? Thank you.
