Subject: car emmissions

I have read some info concerning the new proposals on the regulation. I m always supportive of improvements.

I do have one concern. Delawareans have a lot of traffic we deal with in small towns and on the interstate that reigns from other states. A ride on the Kirkwood Hwy or on Rt 13 is consistently full of out of state plates due to the shopping advantages and beach traffic. Also it's a well known problem that the city of Wilmington and Elsmere are housing many people living in the city limits driving cars with out of state plates.

Considering the economics of our time with working people struggling to pay the basics I feel its going to be quite a burden on small businesses and residents to be held liable for conditions beyond our control.

I am a De native ,always have held down a job, often two at a time. I can honestly say that my friends , co workers and family are folks that are open to new ideas on improving the environment in which we live but we are all just holding our own financially. There isn't any give on purchasing big items these days.

With the loss of General Motors and The Chrysler plant and downsizing of corporations in our area the average worker is struggling.

If I could afford to purchase new vehicle I would be hesitant to purchase one now with these proposed changes. It would be needing changes bringing on costs that De residents would need to take on. It will not affect the situations involving the many out of state plates belonging to folks living in Delaware and driving our heavily traveled roads.

Thank you for considering my letter.
