

Delaware National Estuarine Research Reserve Blackbird Creek Reserve

The Blackbird Creek Reserve component of the Delaware National Estuarine Research Reserve (DNERR) is 1,180 acres in designated size, situated along 5.7 miles of low-salinity brackish and freshwater tidal creek, starting about 5.8 miles upstream from where Blackbird Creek empties into the lower Delaware River. The total length of tidal Blackbird Creek is about 11.5 miles.

The Blackbird Creek Reserve component contains 50 parcels of land held by private landholders, plus the DNERR and the Division of Fish and Wildlife.

NOTE: Reserve owned properties are in light blue. Division of Fish & Wildlife properties are in dark blue. All other properties are privately owned and are not accessible without landowner permission.
