## **1. Overview**

To demonstrate that an agricultural manure management offset project qualifies for the award of CO<sub>2</sub> offset allowances, a Project Sponsor must submit to the Department, a fully completed *Offset Project Monitoring & Verification Report – Avoided Methane Emissions from Agricultural Manure Management* (“*M & V Report*”), including the coversheet and all forms and related attachments. An incomplete *M & V Report* will not be reviewed to determine consistency. Following these instructions will ensure that the *M & V Report* contains all necessary information and is submitted properly.

Each Project Sponsor should review 7 DE Reg. 1147 addressing offset projects and the award of CO<sub>2</sub> allowances. All offset application materials and other documents are available at

## **2. Submission Instruction**

Submit one (1) complete hardcopy original *M & V Report* as well as an electronic copy in the form of a CD disk to the Department at the location specified below. Submit hardcopies of forms requiring signatures as originally-signed copies and scan such signed forms for electronic submission. Facsimiles of the *M & V Report* are not acceptable under any circumstances.

***CO<sub>2</sub> Budget Trading Program  
DNREC Air Quality Management  
156 South State Street  
Dover, Delaware 19901***

The *M&V Report* has three parts, as described below. Each part comprises specified forms and required documentation. *The M&V Report* has been created as a Microsoft Word document with editable fields. Enter information directly in the fields provided or submit information or documentation as an attachment, as instructed. Include headers on all attachments indicating the form to which each is attached, the offset project name, and offset project ID code.

The Project Sponsor should save an electronic copy for his or her file to serve as a reference for any remediation.

## **3. M & V Report Forms**

The *M & V Report* has three parts, as described below. Each part comprises specified forms and required documentation. *The M & V Report* has been created as a Microsoft Word document with editable fields. Enter information directly into the fields provided or submit information or documentation as an attachment, as directed.

The Project Sponsor should save an electronic copy for his or her file to serve as a reference for any necessary remediation.

Emissions from Agricultural Manure Management**

M&V Instructions  
DAQ– Offsets  
Agricultural  
Manure  
Management  
Page 3 of 13

The *M & V Report* includes eight (8) forms divided into three parts, as follows:

**Part 1. General Information Forms**

- Form 1.1 – General Information
- Form 1.2 – Project Sponsor Attestations
- Form 1.3 – Project Sponsor Agreement
- Form 1.4– Disclosure of Greenhouse Gas Emissions Data Reporting

**Part 2. Category-Specific Information and Documentation Forms**

- Form 2.1 – Demonstration of Conformance with M&V Plan
- Form 2.2 – Demonstration of Emissions Reduction

**Part 3. Independent Verification Form**

- Form 3.1 – Independent Verifier Certification Statement and Report

The following instructions address each of the forms in numerical order. Note that the forms themselves include many embedded instructions.

## COVERSHEET

Check the boxes to indicate which forms are being submitted.

### Part 1. Preliminary Information Forms

---

#### Form 1.1. General Information

Enter the requested information in the editable text fields in the form. If a text field is not applicable or is unanswerable, enter “NA.” Note the following:

Offset Project ID Code: Enter the offset project ID code. The offset project ID code is the alphanumeric code generated when the Project Sponsor creates a record of the offset project in the RGGI CO<sub>2</sub> Allowance Tracking System (RGGI COATS). See the RGGI COATS User’s Guide for more information about creating an offset project record in RGGI COATS, available at <http://www.rggi-coats.org>.

Project Information: Enter project information. The name of the offset project should be the same name entered by the Project Sponsor when creating a project record in RGGI COATS. The project location entered should be the primary location of the project if the project consists of actions at multiple locations. The summary narrative of the project should indicate all locations where project actions occur or will occur.

Project Sponsor: Identify the Project Sponsor and provide his or her contact information. The Project Sponsor is the natural person who is the Authorized Account Representative for the RGGI COATS general account identified in the *M & V Report*.

Project Sponsor Organization: Provide the full legal name of the organization the Project Sponsor represents, including any alternative names under which the organization also may be doing business (e.g., John Doe Enterprises, Inc., d/b/a JDE). If the Project Sponsor is representing himself or herself as an individual, enter “NA”.

RGGI COATS General Account Name and Number: Enter the RGGI COATS general account name and number. The RGGI COATS general account identified in the *M & V Report* is the RGGI COATS account into which any awarded CO<sub>2</sub> offset allowances related to the offset project will be transferred.

DAQ– Offsets  
Agricultural  
Manure  
Management  
Page 5 of 13

**Form 1.2 Project Sponsor Attestations**

Check the boxes that apply, sign and date the form. Submit the originally signed form as part of the paper hardcopy *M & V Report*. Scan the signed and dated form for submission as part of the electronic version of the *M & V Report*.

---

**Form 1.3 Project Sponsor Agreement**

Sign and date the form. Submit the originally signed form as part of the paper hardcopy *M & V Report*. Scan the signed and dated form for submission as part of the electronic version of the *M & V Report*.

---

**Form 1.4 Disclosures of Greenhouse Gas Emissions Data Reporting**

Check the appropriate box in the form to indicate whether greenhouse gas emissions data related to the offset project have been or will be reported to any voluntary or mandatory programs other than the CO<sub>2</sub> Budget Trading Program. For each program for which data have been or will be reported, provide the program name, the program type (voluntary or mandatory), program contact information (website or street address), the categories of data reported, the frequency of reporting, when the reporting began or will begin, and reporting status (prior, current, future). The Project Sponsor must disclose future reporting related to current commitments made to voluntary programs as well as future reporting mandated by current statutes, regulations, or judicial or administrative orders.

---

**Part 2. Category-Specific Information and Documentation Forms**

The two (2) forms in Part 2 of the M&V Report address documentation of conformance with the Monitoring and Verification Plan (M&V Plan) and determination of CO<sub>2</sub>-equivalent emissions reductions during the reporting period. Instructions for the Part 2 forms are provided below.

---

**Form 2.1 Demonstration of Conformance with M&V Plan**

Provide documentation as an attachment to Form 2.1 that procedures and protocols specified in the M&V Plan were performed and records specified in the M&V Plan were generated and retained. Check the boxes in the tables on Form 2.1 to indicate that the referenced documentation is provided as an attachment to Form 2.1. Each attachment must include a header that identifies it as an attachment to Form 2.1, identifies the appropriate table number and the reference number in the left-hand column of the table, and includes the offset project name and offset project ID code.

DAQ– Offsets  
Agricultural  
Manure  
Management  
Page 6 of 13

**Form 2.2 Determination of Emissions Reduction**

Provide documentation of CO<sub>2</sub>-equivalent emissions reductions achieved during the reporting period. Enter requested information where indicated in Form 2.2 and attach documentation to Form 2.2, as directed below. Each attachment must include a header that indicates it is an attachment to Form 2.2 and identifies the offset project name and offset project ID code. Multiple attachments may be integrated into a single document, as appropriate, as long as each element is clearly identified, as specified below. For submission of the electronic version of the *M&V Report*, spreadsheets must be provided as a distinct electronic file or files (distinct spreadsheets may be incorporated into a single spreadsheet file, as appropriate, as long as each spreadsheet element is clearly identified, as specified below). Check the boxes in Form 2.2 to indicate that requested documentation is attached

1. Baseline Emissions. Enter calculated baseline methane emissions during the reporting period for all facilities supplying manure and/or organic food waste influent to the anaerobic digester, in short tons of CO<sub>2</sub>-equivalent, where indicated in the form. For each reporting month, enter values for the data parameters identified in the form, as a sum of each parameter (except for the van't Hoff-Arrhenius factor), for all facilities supplying manure and/or organic food waste influent to the anaerobic digester. Enter the calculated methane emissions in short tons of CO<sub>2</sub>-equivalent for each reporting month, for all facilities supplying manure and/or organic food waste influent to the anaerobic digester. Attach a spreadsheet that documents the calculation of baseline CO<sub>2</sub>-equivalent emissions for each facility and the sum of CO<sub>2</sub>-equivalent emissions for all facilities. The spreadsheet must also document for each facility the calculation of each monthly data parameter identified in the form and specify the units for all relevant data parameters, as specified below.

For each facility, document calculation of baseline methane emissions for each month of the reporting period in accordance with the procedures at a. through g. below. The baseline methane emissions (in CO<sub>2</sub>e) represent potential emissions due to methane production under site-specific anaerobic storage and weather conditions.

$$\text{Baseline Emissions (short tons CO}_2\text{e)} = [(V_m \times M)/2000] \times \text{GWP}$$

Where:

$V_m$  = Volume of methane produced (scf) each month from degradation of volatile solids

M = Mass of methane per cubic foot (lbs/scf) (note that 0.04246 lbs/scf is the default value at one atmosphere and 68°F or 20°C)

GWP = 23 (CO<sub>2</sub>e global warming potential of methane)

- a. Volatile Solids Degraded. Document calculation of the estimated amount (kg) of volatile solids degraded each month under the uncontrolled anaerobic storage baseline scenario in accordance with the following equation:

**DNREC – Division Air Quality Form  
CO<sub>2</sub> Budget Trading Program  
Monitoring & Verification Instructions Avoided Methane  
Emissions from Agricultural Manure Management**

M&V Instructions  
DAQ– Offsets  
Agricultural  
Manure  
Management  
Page 7 of 13

$$VS_{deg} = VS_{avail} \times f$$

Where:

$VS_{deg}$  = volatile solids degraded each month (kg)

$VS_{avail}$  = volatile solids available for degradation in manure or organic food waste storage each month (kg)

f = van't Hoff-Arrhenius factor for the specific month

- b. Application of van't Hoff-Arrhenius Factor. Document calculation of the van't Hoff-Arrhenius factor for each month, which specifies conversion efficiency of volatile solids to methane, in accordance with the following equation:

$$f = \exp\{[E(T_2 - T_1)]/[GC \times T_1 \times T_2]\}$$

Where:

f = van't Hoff-Arrhenius factor

E = activation energy constant (15,175 cal/mol)

$T_2$  = average monthly ambient temperature (in Kelvin) for facility where manure or organic food waste is generated if reported temperature is greater than 5o C

$T_1$  = 303.15 K (30<sup>o</sup> C converted to K)

GC = ideal gas constant (1.987 cal/K mol)

If reported temperature is less than 5<sup>o</sup> C, as determined from the nearest National Weather Service certified weather station for the facility where manure or organic food waste is managed, then f equals 0.104.

- c. Volatile Solids Available for Degradation. Document calculation of the volatile solids available for degradation in manure or organic food waste storage for each month in accordance with the following equation:

$$VS_{avail} = VS_p + \frac{1}{2} VS_{in} - VS_{out}$$

Where:

$VS_{avail}$  = volatile solids available for degradation each month

**DNREC – Division Air Quality Form  
CO<sub>2</sub> Budget Trading Program  
Monitoring & Verification Instructions Avoided Methane  
Emissions from Agricultural Manure Management**

M&V Instructions  
DAQ– Offsets  
Agricultural  
Manure  
Management  
Page 8 of 13

- $VS_p$  = volatile solids present in manure or organic food waste storage at beginning of the month (kg)
- $VS_{in}$  = volatile solids added to manure or organic food waste storage during the course of the month (kg); multiply this number by the factor of  $\frac{1}{2}$  to represent the average mass of volatile solids available for degradation for the entire duration of the month
- $VS_{out}$  = volatile solids removed from manure or organic food waste storage for land application or export

- d. Mass of Volatile Solids Available at Start of Month. Document calculation of the volatile solids present in manure or organic food waste storage at the beginning of each month in accordance with the equation below:

$$VS_p = (M_m \times TS_{\%} \times VS_{\%}_p)$$

Where:

- $VS_p$  = volatile solids present in manure or organic food waste storage at the beginning of each month (kg)
- $M_m$  = mass (kg) of manure or organic food waste present in storage at the beginning of the month
- $TS_{\%}$  = concentration (percent) of total solids in manure and organic food waste as determined through U.S. EPA 160.3 testing method (U.S. EPA Method Number 160.3, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020))
- $VS_{\%}$  = concentration (percent) of volatile solids in total solids as determined through U.S. EPA 160.4 testing method (U.S. EPA Method Number 160.4, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020))

- e. Mass of Volatile Solids Added During Month. Document calculation of the volatile solids added to manure or organic food waste storage during the course of each month in accordance with the following equation:

$$VS_{in} = (M_m \times TS_{\%} \times VS_{\%}_{in})$$

Where:

**DNREC – Division Air Quality Form  
CO<sub>2</sub> Budget Trading Program  
Monitoring & Verification Instructions Avoided Methane  
Emissions from Agricultural Manure Management**

M&V Instructions  
DAQ– Offsets  
Agricultural  
Manure  
Management  
Page 9 of 13

- $VS_{in}$  = volatile solids added to manure or organic food waste storage during the course of each month (kg)
- $M_m$  = mass (kg) of manure or organic food waste added to storage at the beginning of the month
- $TS_{\%}$  = concentration (percent) of total solids in manure and organic food waste as determined through U.S. EPA 160.3 testing method (U.S. EPA Method Number 160.3, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020))
- $VS_{\%}$  = concentration (percent) of volatile solids in total solids as determined through U.S. EPA 160.4 testing method (U.S. EPA Method Number 160.4, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020))

- f. Mass of Volatile Solids Removed During Month. Document calculation of the volatile solids removed from manure or organic food waste storage for land application or export for each month (document assumed value based on practices the farm employed prior to the commencement of the offset project consistent with standard practice) in accordance with the following equation:

$$VS_{out} = (M_m \times TS_{\%} \times VS_{\%})_{out}$$

Where:

- $VS_{out}$  = volatile solids removed from manure or organic food waste storage during the course of each month (kg)
- $M_m$  = mass (kg) of manure or organic food waste removed from storage during the month
- $TS_{\%}$  = concentration (percent) of total solids in manure or organic food waste as determined through U.S. EPA 160.3 testing method (U.S. EPA Method Number 160.3, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020))
- $VS_{\%}$  = concentration (percent) of volatile solids in total solids as determined through U.S. EPA 160.4 testing method (U.S. EPA Method Number 160.4, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020))

- g. Volume of Methane Produced. Document calculation of the volume of methane produced from degradation of volatile solids each month in accordance with the following equation:

**DNREC – Division Air Quality Form  
CO<sub>2</sub> Budget Trading Program  
Monitoring & Verification Instructions Avoided Methane  
Emissions from Agricultural Manure Management**

M&V Instructions  
DAQ– Offsets  
Agricultural  
Manure  
Management  
Page 10 of 13

$$V_m = (VS_{deg} \times B_o) \times 35.3147 \text{ cubic feet per cubic meter}$$

Where:

$V_m$  = volume of methane produced (scf)

$VS_{deg}$  = volatile solids degraded (kg)

$B_o$  = manure or organic food waste type-specific maximum methane generation constant (mmethane/kg VS3 deg). For dairy cow manure,  $B_o = 0.24$  m methane/kg VS3deg. For other types of manure, use the methane generation constants cited in U.S. EPA, Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-2004, Annex 3, Table A-162 (U.S. EPA, April 2007)

2. Methane Emissions Captured and Destroyed Using Anaerobic Digester. Attach a spreadsheet documenting the data sources and calculations used to quantify the annual volume of methane emissions (in standard cubic feet of methane and CO<sub>2</sub>-equivalent) captured and destroyed by the anaerobic digester. Indicate whether methane concentration of digester biogas is continuously monitored.

If a direct continuous monitoring system is measuring methane concentration of recovered digester biogas, the spreadsheet must include the following data and calculations:

- Daily methane recovery (in standard cubic feet of methane) from the continuous monitoring system for each day in the reporting period
- Sum of the daily methane recovery (in standard cubic feet of methane) on a monthly basis
- Sum of the monthly methane recovery to obtain total annual methane recovery (in standard cubic feet of methane per year and short tons of CO<sub>2</sub>-equivalent per year) from the digester

If a direct continuous monitoring system is monitoring digester biogas flow only, the spreadsheet must include the following data and calculations:

- Tabulation of daily digester biogas flow (in standard cubic feet) from the continuous monitoring system for each day in the reporting period
- Sum of daily digester biogas flow on a weekly basis (in standard cubic feet)
- Weekly methane concentration measurements (in percent of sample by volume) using calibrated digester biogas analyzer
- Weekly methane recovery (in standard cubic feet of methane), obtained by multiplying the weekly digester biogas flow rate by the respective week's methane concentration measurement (in percent of sample by volume)
- Sum of weekly methane recovery (in standard cubic feet of methane) on a monthly basis

Agricultural  
Manure  
Management  
Page 11 of 13

- Sum of monthly methane recovery to obtain total annual methane recovery from the digester (in standard cubic feet of methane and short tons of CO<sub>2</sub>-equivalent)

3. Transport CO<sub>2</sub>-Equivalent Emissions. If the offset project is a regional-type digester, attach a spreadsheet documenting quantification of CO<sub>2</sub> emissions due to transportation of manure and/or organic food waste from the off-site facilities where the manure and/or organic food waste was generated to the anaerobic digester. The spreadsheet must specify data sources and calculations. To determine transport CO<sub>2</sub> emissions, the spreadsheet must document use of one of the following two methods:

- a. Method 1: Emission factors for type and quantity of fuel used

Identify data sources and calculations used to determine fuel use for all shipments of manure and organic food waste from off-site facilities to the anaerobic digester during the reporting period. Specify how transport miles and quantity of fuel used for each shipment were determined and recorded. Specify the emissions factors used, which may include:

- Diesel fuel: 22.912 lbs CO<sub>2</sub>/gallon
- Gasoline: 19.878 lbs CO<sub>2</sub>/gallon
- Other fuel: emission factor approved by the Department

- b. Method 2: Emission factors for type of fuel used by the ton-mile

Identify data sources and calculations used to determine total tons of manure and organic food waste transported from off-site facilities for input into the anaerobic digester during the reporting period. Specify how transport tons, transport miles, and fuel type used for each shipment were determined and recorded. Specify the emissions factors used, which may include:

- Diesel fuel: 0.131 lbs CO<sub>2</sub> per ton-mile
- Gasoline: 0.133 lbs CO<sub>2</sub> per ton-mile
- Other fuel: emission factor approved by the Department

4. Determination of Emissions Reductions. Enter the emissions reductions achieved by the offset project in short tons of CO<sub>2</sub>-equivalent where indicated in Form 2.2. Emissions reductions are equivalent to the annual baseline methane emissions or annual methane captured and destroyed by the anaerobic digester (both in short tons of CO<sub>2</sub>-equivalent), whichever is less. For regional-type digesters, emissions reductions must be the net emissions reductions achieved after subtraction of any transport-related CO<sub>2</sub> emissions.

### **Part 3. Independent Verification Form**

The form in Part 3 of the *M & V Report* addresses requirements and documentation related to the independent verifier certification statement and report. Instructions for the form in Part 3 are provided below.

---

#### **Form 3.1 Independent Verifier Certification Statement and Report**

An accredited verifier must sign and date the form. Submit the originally signed form as part of the paper hardcopy of the *M & V Report*. Scan the signed and dated form for submission as part of the electronic version of the *M & V Report*.

Provide the independent verifier report as an attachment to Form 3.1. The verifier report must include a header that indicates it is an attachment to Form 3.1 and includes the offset project name and offset project ID code.

The verifier report must document the following:

1. The verifier has reviewed the entire *M & V Report* and evaluated the contents of the application in relation to the applicable requirements of 7 DE Reg. 1147-10.6.
2. The verifier has evaluated the adequacy and validity of information supplied by the Project Sponsor to demonstrate that the offset project meets the applicable eligibility requirements of 7 DE Reg. 1147-10.3 and 7 DE Reg. 1147-10.6.
3. The verifier has evaluated the adequacy and validity of information supplied by the Project Sponsor to demonstrate baseline emissions, pursuant to the applicable requirements of 7 DE Reg. 1147-10.6.
4. The verifier has evaluated the adequacy of the Monitoring and Verification Plan submitted pursuant to 7 DE Reg. 1147-10.6.

The verifier report must include the following contents, in the order listed below:

- Cover page with report title and date
- Table of contents
- List of acronyms and abbreviations
- Executive summary
- Description of objective of report
- Identification of the client, including name, address, and other contact information
- Identification of the offset project
- Description of evaluation criteria (applicable regulatory provisions and documentation required in the *M & V Report* )
- Description of the review and evaluation process, including any site visits and interviews
