RE: Draft 3, Regulation 44

Attached are comments on Draft 3 of Regulation 44 from the Engine Manufacturers Association. In general, we believe that the document is much improved and that the revised emissions standards provide adequate and appropriate controls over Distributed Generation sources. We recommend two additional changes related to the emissions standards for waste gases and the time period for certification.

As I mentioned, I will not be able to make it to the meeting tomorrow. Please distribute our comments to the other stakeholder participants as you see fit.

Thanks for all your work on this regulation and your willingness to consider options and changes.
