

**LEGAL NOTICE
CHANGE OF DATE FOR PUBLIC WORKSHOP**

The Department of Natural Resources and Environmental Control (DNREC), Division of Air Quality (DAQ) will conduct a public workshop on the planned revision to 7 DE Admin Code 1108 (Regulation 1108) "Sulfur Oxide Emissions from Fuel Burning Equipment."

The purpose of this revision is to reduce the allowable content of sulfur in fuel oils being combusted in all three counties in Delaware and to extend the maximum sulfur in fuel requirement currently applicable to New Castle County to the whole state. Use of fuel oils with lower sulfur contents will effectively reduce emissions of sulfur dioxide (SO₂) into the atmosphere. Such emission reductions will aid in the attainment and maintenance of Delaware's air quality relative to SO₂ and fine particulate matter (PM_{2.5}) National Ambient Air Quality Standards (NAAQS). The reductions will also reduce acid rain, and will aid in reaching visibility goals of the federal regional haze program. Other North-East and Mid-Atlantic States are adopting similar low-sulfur fuel regulations.

WORKSHOP SCHEDULE

A workshop will be held on **Monday, August 13, 2012, at 6:00 pm**, in the DNREC Auditorium, 89 Kings Highway, Dover, DE. The purpose of this public workshop is to educate the public and the affected industry on the subject issue and the draft revision to Regulation 1108, and to hear comments and recommendations to aid in the development of this revision. The draft regulation is currently available on DAQ's regulatory web site at <http://www.dnrec.delaware.gov/whs/awm/Info/Regs/Pages/Section1108.aspx> and will also be provided at the workshop. The workshop was originally scheduled for Wednesday, August 9, 2012. For additional information please contact Mr. Frank Gao, in New Castle, at (302) 323-4542, or Mr. David Fees, in Dover, at (302) 739-9402.
