

## EXHIBIT 9

### GROUNDWATER AND STORM WATER MONITORING SYSTEMS

The Pigeon Point Landfill has a system of groundwater monitoring wells and a series of storm water basins on the site. These systems were installed during the operating life of the landfill and have been monitored and maintained for many years. Detailed drawings of these systems are included in **EXHIBIT 12**.

Protection of groundwater monitoring wells is provided by the use of steel outer casings protecting the PVC inner well casings. In areas where the wells may be at higher risk to damage due to vehicular traffic, additional protective barriers, such as concrete rings are used.

Contractors employed by DSWA currently perform the monitoring, maintenance, and inspection of the groundwater monitoring system and the storm water basins. This work is specifically described in **EXHIBIT 13**.
