# Delaware Water Pollution Control Revolving Fund

## Revised Fiscal Year 2017 Intended Use Plan

---

### I. Introduction

This Revised Intended Use Plan (IUP) is required by Section 606(c) of the Clean Water Act (CWA), and will be submitted to the U.S. Environmental Protection Agency (EPA) as part of the State of Delaware's FFY 2017 Federal Capitalization Grant (FFY 2017 Grant) Application. Two IUPs are prepared annually to ensure that all potential loan applicants have an opportunity to submit project needs for funding consideration. This is the first IUP, which will be submitted to EPA in June 2017.

The IUP identifies the intended use of the funds requested, and how the additional financial assistance will support the goals of the Delaware Water Pollution Control Revolving Fund (WPCRF). The mission of the WPCRF is to provide a continuing source of financing for environmental infrastructure capital needs to maintain and improve water quality. Financial assistance is provided by the WPCRF to public and private entities for planning, design, and construction of wastewater collection, treatment and disposal facilities, stormwater infrastructure improvements, non-point source, and estuary water pollution control projects. The terms "WPCRF" and Clean Water State Revolving Fund "CWSRF" are used interchangeably in this document and have the same meaning.

Although previously approved and awarded by EPA, this IUP also describes the transfer of federal funds between the Department of Health and Social Service's (DHSS) Drinking Water State Revolving Fund (DWSRF) and the WPCRF. It identifies how the additional financial assistance was used to support the goals of the WPCRF; and the amount of the transfer.

All eligible applicants submitting Project Notices-of-Intent (NOIs) are listed on the FFY 2017 Project Priority List (FFY 2017 PPL) in priority order. However, no funds are committed or reserved for individual projects until financial assistance applications are solicited, received and approved; indicating the project's readiness to proceed. Projects that are ready to proceed are then funded in priority order.

### II. WPCRF Program Goals

The State of Delaware is committed to using federal capitalization grants to provide financial assistance for eligible projects that will proceed quickly to construction, and further the water quality mission of the WPCRF. The following are the WPCRF short-term and long-term goals.

#### Short-Term Goals

To enter into binding commitments for projects that will proceed to construction or award of construction contracts within eight (8) quarters of the FFY 2017 Grant award.

To achieve a CWSRF program "PACE" that exceeds 95 percent utilization of available funds for project binding loan commitments.

To expand the loan portfolio of the WPCRF to include other innovative uses such as loans for land conservation, stormwater, water conservation, energy efficiency, as well as green and sustainable water infrastructure projects consistent with CWSRF program rules, requirements, and regulations.

To enhance the collaboration between DNREC and DHSS relative to the operation of the CWSRF and DWSRF programs. These enhancements will focus on adding increased program value to applicants and borrowers, such as:

- Combined CWSRF and DWSRF Semi-Annual Workshops
- On-line CWSRF and DWSRF document submittal capability
- Offering Planning and Design Loans for Projects that are not Ready to Proceed
- Combined CWSRF and DWSRF Loan Closings (where applicable)
- Eliminate need for Interim Construction Project Financing from other funding sources (bank financing for project construction is not needed; CWSRF and DWSRF funds can be used for project planning, design, and construction); loan reimbursement requests based on incurred eligible project costs are normally processed with 30 days
- Processing Loan Reimbursement Requests within 30 days or less

To analyze financial leveraging as a tool that may be needed to help meet the growing demand for loans provided by the WPCRF.

To comply with all federal capitalization grant and project reporting requirements. Including updating all WPCRF documents that reference 40 CRF Parts 30 & 31 with 2 CFR 200 for the following administrative program requirements.

- A-133 with 2 CFR 200 Subpart F (Audit Requirements)
- A-87 with 2 CFR 300 Subpart E (Cost Principles)

#### Long-Term Goals

To ensure the long-term viability of the WPCRF program, while providing necessary project subsidization when needed.

To optimize the WPCRF program to address changing loan demand for Non-Point Source concerns and other difficult to finance water quality improvement issues.

To identify and fund projects associated with the Water Resources Reform and Development Act (WRRDA) – Expanded Project Eligibilities.

To periodically evaluate additional funding opportunities to meet emerging water quality and public health needs.

### III. Fund Sources, Uses, and Program Requirement

DNREC will apply for the full amount of the FFY 2017 Federal Capitalization Grant totaling \$6,474,000 for which a twenty percent (20%) state match \$1,294,000 is required. The required (20%) state match will be provided in-part from a state appropriation and remaining 21<sup>st</sup> Century Fund accounts. EPA previously awarded DNREC a FFY 2012 Federal Capitalization Grant that included converted DWSRF transferred funds totaling \$27,050,176 for which a twenty percent state match appropriation totaling \$5,410,035 was provided by DHSS.

Water Resources Reform and Development Act (WRRDA) amendment changes to the CWSRF program allow 1/5% of the WPCRF's FY 2016 Net Fund Position to be used for program administration, a total of \$551,642 is authorized and will be used. 30% \$1,942,200 of the FFY 2017 Grant may be used for principal loan forgiveness based on project affordability. At least ten percent (10%) \$647,400 of the FFY 2017 Grant must be used for principal loan forgiveness for any borrower; and (10%) \$647,400 must be used for projects funded under a Green Project Reserve (GPR) - green infrastructure, water or energy efficiency, and innovative uses.

Table 1 – Fund Sources, Uses, and Program Requirement

<u>Sources:</u>	<u>FFY 2017</u>	<u>FFY 2012</u>
Federal Capitalization Grant	\$6,474,000	\$27,050,176
State Match – 20%	<u>\$1,294,800</u>	<u>\$ 5,410,035</u>
Total Sources	\$7,768,800	\$32,460,211
 <u>Uses:</u>		
WPCRF Administration (4%)		\$ 1,082,007
WPCRF Administration (1/5 of 1%)	\$ 551,642	
Program Loans	\$7,768,800	\$31,378,204
 30% Principal Loan Forgiveness	\$1,942,200	
 <u>Requirement:</u>		
10% Principal Loan Forgiveness	\$ 647,400	
10% Green Project Reserve	\$ 647,400	

#### Cross Collateralization between SRF programs

\$27,050,176 in Federal and \$5,410,035 in State funds transferred from the DWSRF program to the CWSRF program will be repaid by meeting DWSRF loan disbursement needs. It is the understanding between both DNREC and DHSS that up to \$32,460,211 will be made available for DWSRF loan disbursements after the following funding sources have been exhausted: first Federal Capitalization Grants; and second DWSRF loan repayments. After these funding sources have been exhausted, DNREC will provide loan disbursements for existing and/or new DWSRF loans on a cash flow basis as needed up to the amount of the previously transferred DWSRF funds stated above. To date, no funds have been transferred back to the DWSRF program. An accounting of DWSRF

repayments will be included in this document, and the Annual Reports for the CWSRF and DWSRF programs.

#### IV. Project Selection Funding Process

On May 9, 2013, the City of Wilmington’s CWSRF loan for its Renewable Energy Biosolids Facility (REBF) project was closed. The loan was used for the long-term financing of the REBF project; the City obtained another source of financing for project construction. FFY 2012 Transferred Grant Funds were be used in part to fund the loan to the City.

On December 16, 2016 a Workshop was held to provide a detailed overview of the CWSRF and DWSRF programs; and to inform municipalities, private businesses, consulting engineering firms, non-profits, and other interested parties of the need to submit NOIs for the FFY 2017 PPL process by January 31, 2017. A second workshop was held on July 14, 2017 and a second solicitation was held accepting NOIs until August 31, 2017. Twenty-five (25) NOIs were received totaling \$79,362,355 from the first and second solicitations.

The selection process for funding projects in part with FFY 2017 Grant funds is based on their respective Revised FFY 2017 PPL ranking, and readiness to proceed. The following projects totaling \$106,900,649 may receive CWSRF funding; thirty-six (36) Wastewater Projects totaling \$89,461,649; and two (2) Green Project Reserve (GPR) projects totaling \$17,439,000. Prior year projects remain on the funding list until the associated loans are closed or withdrawn by applicants.

Table 2 - Wastewater Projects Selected for Funding

<u>Applicant / Project Name</u>	<u>Project Cost</u>	<u>CWSRF</u>
<u>Sussex County</u>		
• Chapel Branch	\$ 3,744,323	\$ 3,744,323
• Western Sussex	\$12,700,000	\$12,700,000
• Joy Beach	\$ 4,500,000	\$ 4,500,00
• Bethany Forest	\$ 2,452,154	\$ 2,452,154
• Branch, Autumn, and Tucks Road	\$ 800,000	\$ 800,000
• Mulberry Knoll	\$ 2,813,062	\$ 2,813,062
• Oak Acres	\$ 2,500,000	\$ 2,500,000
• Mallard Creek	\$ 2,000,000	\$ 2,000,000
• Tanglewood	\$ 1,400,000	\$ 1,400,000
<u>Kent County Levy Court</u>		
• Air System (Blower) Optimization Project	\$ 4,513,700	\$ 1,354,110
• Plant Wide Backup (Emergency) Power	\$ 3,747,400	\$ 1,237,400
• US Route 13 Forcemain Rehabilitation	\$ 3,980,000	\$ 3,980,000

City of Dover

• Walker Woods Pump Station Replacement	\$ 460,000	\$ 408,000
• Delaware Tech Pump Station Replacement	\$ 436,000	\$ 384,000
• Lepore Road Sanitary Sewer Upgrade	\$ 300,000	\$ 250,000
• Silver Lake Pump Station Replacement	\$ 448,000	\$ 396,000
• Tar Ditch Interceptor	\$ 250,000	\$ 250,000
• Meeting House Branch Env. Restoration	\$ 8,203,542	\$ 7,600,000

City of Newark

• Western Area Drainage Flood Mitigation	\$ 10,000,000	\$ 10,000,000
--	---------------	---------------

New Castle County Special Services

• Christina River Force Main Emergency	\$ 10,000,000	\$ 10,000,000
• Hunter's Ridge	\$ 350,000	\$ 350,000
• Perch Creek Stormwater Pond Rehab.	\$ 265,000	\$ 265,000
• Morningside Stormwater Pond Rehab.	\$ 250,000	\$ 250,000
• Muddy 6 Sewer Capacity Improvement	\$ 2,000,000	\$ 2,000,000
• Hockessin Greene Stormwater Pond Rehab.	\$ 372,000	\$ 350,000
• Woodside Court Stormwater Pond Rehab.	\$ 436,150	\$ 400,000
• Mill Creek Sanitary Sewer Repair Project	\$ 1,443,330	\$ 1,300,000
• 2016 Sanitary Sewer Rehabilitation	\$ 1,165,000	\$ 1,105,000
• Mt. Pleasant Interceptor	\$ 4,768,000	\$ 4,500,000

Town of Smyrna

• South Main Street Utility Replacement	\$ 1,606,100	\$ 1,600,600
---	--------------	--------------

Fort Dupont Redevelopment Corporation

• Stormwater Management Improvements	\$ 927,000	\$ 927,000
• Sewer Improvements	\$ 520,000	\$ 520,000
• Floodproofing Improvements (Dike)	\$ 2,180,000	\$ 2,180,000

City of Lewes Board of Public Works

• Abbott Park Sewer Improvements	\$ 155,000	\$ 155,000
----------------------------------	------------	------------

Delaware City

• Washington Street Flood Mitigation	\$ 790,000	\$ 790,000
--------------------------------------	------------	------------

DNREC, Division of Watershed Stewardship

• Middle Island Dredge Replacement Site	\$ 4,000,000	\$ 4,000,000
---	--------------	--------------

Sub-Total Municipal Wastewater Projects	<u>\$ 97,075,761</u>	<u>\$ 89,461,649</u>
---	----------------------	----------------------

Loans for two (2) GPR projects are anticipated to close during the year.

Total Municipal Wastewater & GPR Project Funding	<b><u>\$114,634,761</u></b>	<b><u>\$106,900,649</u></b>

## V. Interest Rates and Loan Terms

2% loans are currently offered under the CWSRF – DWSRF Interim Interest Rate Policy; the policy was scheduled to sunset on December 31, 2016. However, the Water Infrastructure Advisory Council (WIAC) on December 7, 2016 recommended extending the Interim Interest Rate Policy to December 31, 2017. Borrowers can receive a lower interest rate and/or other project subsidies based on project affordability. Sewer user charge affordability review criteria are based on one and a half percent (1.5%) of Median Household Income (MHI) for residential wastewater or drinking water service; and 2.0% of MHI for combined services.

## VI. New Affordability Criteria

June 10, 2014 President Obama signed into law the WRRDA. The amendment changes under Title VI of the Clean Water Act apply to Federal Water Pollution Control Act that created the CWSRF Program. In addition to income criteria for project affordability, the State was required by WRRDA to develop additional measures associated with unemployment data, and population trends by September 30, 2015. Affordability criteria for the additional measures are the following:

Unemployment Data – Nonpayment of residential wastewater and drinking water utility bills are normally directly associated with insufficient income and unemployment. Residential utility bill delinquency rates are used as a proxy measure for unemployment. 5% residential utility delinquency rate will be assumed for both wastewater and drinking water when evaluating CWSRF loan applications for assistance. CWSRF loan applicants will be required to provide additional documentation to support a residential delinquency rate above 5%;

Population Trends – Wastewater utilities can be negatively impacted by decreasing population in relation to fixed assets and expenses that were designed/sized to service a larger customer base. The estimated number of Equivalent Dwelling Units (EDUs; 1 household = 1 EDU) served by a wastewater utility is used as a proxy measure for population trends. CWSRF loan applicants negatively impacted by decreasing number of EDUs served in relation to their proposed project(s) will be required to provide

documentation to receive a systems revenue credit that cannot exceed the difference in the number of EDUs served over the past 5 years.

## **VII. Authority to Provide Additional Subsidization**

The DNREC has the authority to implement the WPCRF under 29 Del. C. Ch. 80, §8003. The authority includes any other allowable purposes under the CWA as amended.

## **VIII. Expanded Use Programs**

### Septic Rehabilitation Loan Program

Environmental Finance and the Groundwater Discharge Section jointly manage the Septic Rehabilitation Loan Program (SRLP) within DNREC. The SRLP provides financial assistance low to moderate income homeowners to replace failing septic systems. Mobile home park owners are also eligible to receive assistance to replace failing decentralized community wastewater systems, limited to \$250,000 or less. Based on historical trends, the budget for funding the SRLP is \$500,000.

### Agricultural Non-Point Source Loan Program

DNREC and State Conservation Districts have established a loan program to provide financial assistance to poultry and dairy producers to help manage Non-Point Source Pollution. Agricultural Non-Point Source Loan (AgNPSLP) funds are leveraged with Federal and State Cost Share assistance from Conservation Districts, to provide low interest loans to producers for manure storage/management and dead bird composters. AgNPSLP loans are made available for up to ninety percent (90%) of a producer's share of the cost for manure storage structures, dead bird composting structures, and structures to effectively utilize and manage manure from dairy cattle. Based on historical trends, the budget for funding the AgNPSLP is \$500,000.

### Expanded Uses Non-Point Source Loan Program

The purpose of the Expanded Uses NPS Loan Program (EUNPSLP) is to provide financial assistance to private landowners, homeowners associations, corporations, municipalities, state government, non-profit organizations, and Estuary Programs to implement NPS initiatives identified in Delaware's NPS Management Plan. Loans for eligible practices may range from \$1,000 up to \$250,000 and will be subject to approval based on the availability of funds.

Projects eligible under the EUNPSLP program are the following:

- Sediment and stormwater management practices that are not being installed as a required component for compliance with the State Sediment and Stormwater Program.
- Eligible best management practices (BMPs) include retrofits to stormwater management ponds, stormwater management facilities, inlet devices, pollutant removal devices, catch basin retrofits, and equipment such as street sweepers and catch basin vacuum vehicles.
- Nutrient management BMPs and equipment such as composting equipment, transport equipment, storage structures, and manure spreaders.

- Waterbody restoration BMPs such as streambank stabilization, wetland restoration/creation, and restoration of riparian vegetation.
- Implementation of Estuary Conservation and Management Plans excluding education and outreach (project must be consistent with EPA approved estuary plan).

Based on estimated demand for the program, the annual budget for the EUNPSLP is \$500,000.

#### Leaking Storage Tank Remediation Loan Program (LSTRLP)

DNREC's Underground Storage Tank Branch (USTB) administers the Leaking Storage Tank Remediation Loan Program, through an operating agreement with the Environmental Finance. The LSTRLP provides loans to assist with the removal, retrofit, clean up of contaminated sites, and corrosion protection for leaking underground storage tanks in Delaware's priority watersheds. Most loans are made to commercial businesses (petroleum service stations) that have a documented contaminated site within a priority watershed as a result of normal aging and/or corrosion of an underground storage tank. Any site found to be contaminated must comply with reporting requirements established by Delaware's Regulation Governing Underground Storage Tank Systems. Based on historical trends, the budget for funding the LSTRLP is \$240,000.

### **IX. Loans for Private Businesses, Private Land Owners, Privately-Owned Projects**

WRRDA created new funding eligibilities, the most significant is the ability to make direct loans to private businesses, and land-owners to implement stormwater improvements on private property throughout the State. Private businesses, private land owners, and privately-owned centralized wastewater treatment projects are still eligible under the Clean Water Act Section 320 Estuary Program as long as the project is within a national estuary and consistent with the Comprehensive Conservation Management Plans (CCMPs), consistency to be determined by Environmental Finance staff.

### **X. Project Eligibilities**

Thirty percent or more of an annual federal capitalization grants can be allocated to a Green Project Reserve. The intended use of the reserve is to help facilitate the implementation of projects that conserve or reuse water; conserve or reduce energy use; improved water quality with green infrastructure, and/or promote environmentally innovative activities and sustainability. The following is an overview of CWSRF project eligibility categories that includes Water Efficiency; Energy Efficiency; Green Infrastructure; and Environmentally Innovative/Sustainability Projects. The Land Conservation Loan Sponsorship and Water Quality Improvement Loan Sponsorship Programs are designed to help to facilitate project financing.

Entities eligible for CWSRF assistance include: municipalities, and state agencies for the construction of publicly owned treatment works defined in Section 212 of the Clean Water Act (CWA); public or private entities that implement projects under Delaware's Nonpoint Source Management Plans defined in Section 319 of the CWA; and public or private entities that implement projects under Delaware's Estuary Comprehensive Conservation Management Plans as defined in Section 320 of the CWA. Eligible assistance activities include:

1. Planning and design activities that are reasonably expected to result in a capital project;
2. Building activities that implement capital projects; and
3. Water Efficiency, Energy Efficiency, Green Infrastructure, and Environmentally Innovative/Sustainable stand-alone projects are eligible; they do not need to be part of a larger capital improvement project.

### Water Efficiency

Water efficiency is the use of improved technologies and practices to deliver equal or better services with less water. Examples of water efficiency projects include:

1. Installation of water meters;
2. Retrofit or replacement of water using fixtures, fittings, equipment or appliances;
3. Efficient landscape or agricultural irrigation equipment;
4. Systems to recycle gray water;
5. Reclamation, recycling, and reuse of existing rainwater, condensate, degraded water, stormwater, and/or wastewater streams;
6. Collection system leak detection equipment; and
7. Development and initial distribution of public education materials

### Energy Efficiency

Energy efficiency includes capital projects that reduce the energy consumption of eligible water quality projects or produce clean energy used by a treatment works defined in Selection 212 of the CWA. Clean energy includes wind, solar, geothermal, hydroelectric, and biogas combined heat and power systems. Examples of energy efficiency projects include:

1. Energy efficient retrofits and upgrades to pumps and treatment processes;
2. Leak detection equipment for treatment works;
3. Producing clean power for 212 treatment works on site (wind, solar, hydroelectric, geothermal, biogas powered combined heat and power); and
4. Pro-rata share of capital costs for offsite publicly owned clean energy facilities that provide power to a treatment works.

### Green Infrastructure

Green Infrastructure includes a wide array of practices at multiple scales that manage wet weather to maintain and restore natural hydrology by infiltrating, evapotranspiring and capturing and using stormwater. On a regional scale, green infrastructure is the preservation and restoration of natural landscape features, such as forests, floodplains and wetlands, coupled with policies such as infill and redevelopment that reduce overall imperviousness in a watershed. On the local scale green infrastructure consists of site- and neighborhood-specific practices, such as bioretention, trees, green roofs, porous pavements and cisterns. In addition to managing rainfall, these green infrastructure technologies can simultaneously provide other benefits such as helping filter air pollutants, reducing energy demands, mitigating urban heat islands, and sequestering

carbon while also providing communities with aesthetic, recreational and natural resource benefits.

Examples of green infrastructure projects include:

1. Implementation of comprehensive street tree or urban forestry programs, including expansion of tree box sizes to manage additional stormwater and enhance tree health;
2. Implementation of green streets (combinations of green infrastructure practices in transportation rights-of-ways), for either new development, redevelopment or retrofits;
3. Implementation of water harvesting and reuse programs or projects, where consistent with state and local laws and policies;
4. Implementation of wet weather management systems for parking areas which include: the incremental cost of porous pavement, bioretention, trees, green roofs, and other practices that mimic natural hydrology and reduce effective imperviousness at one or more scales;
5. Establishment and restoration of riparian buffers, floodplains, wetlands and other natural features; Downspout disconnection to remove stormwater from combined sewers and storm sewers; and
6. Comprehensive retrofit programs designed to keep wet weather out of all types of sewer systems using green infrastructure technologies and approaches.

#### Environmentally Innovative / Sustainability Projects

Environmentally innovative may include projects that demonstrate new and/or innovative approaches to managing water resources in a more sustainable way, including projects that achieve pollution prevention or pollutant removal at the least life-cycle costs, subject to environmental review results. Projects may include approaches that incorporate green infrastructure into drinking water, stormwater, and wastewater utility infrastructure and management.

Examples of environmentally innovative projects include:

1. Green Infrastructure/Low Impact development stormwater projects;
2. Wetland restoration;
3. Decentralized wastewater treatment solutions to existing deficient or failing on site systems;
4. Water reuse projects that reduce energy consumption, recharge aquifers and reduce water withdrawals and treatment costs; The water quality portion of projects that employ development and redevelopment practices that preserve or restore site hydrologic processes through sustainable landscaping and site design;
5. Projects that use water balance approaches (water budgets) at the project, local or state level that preserve site, local or regional hydrology. Such an effort could show-case efforts to plan and manage in a concerted manner, surface and groundwater withdrawals, stream flow (aquatic species protection), wetland and floodplain storage, groundwater recharge and regional or local reuse and harvesting strategies using a quantified methodology;

6. The water quality portion of projects that demonstrate the energy savings and climate change implications of sustainable site design practices and the use of green stormwater infrastructure;
7. Projects that demonstrate the differential uses of water based on the level of treatment and potential uses as a means to reducing the costs of treating all water to potable water standards; and
8. Projects that identify and quantify the benefits of using integrated water resources management approaches.

#### Land Conservation Loan Sponsorship Program

Delaware has developed an innovative approach to help maintain and improve water quality. Forestlands, Open Space, and Wetlands conservation easements and fee simple land parcels can be purchased using traditional CWSRF municipal wastewater loans under the Land Conservation Loan Sponsorship Program (LCLP). Communities in targeted watersheds such as the Chesapeake, Inland Bays, and Delaware Bay that have municipal wastewater projects selected for funding may be offered the opportunity to borrow additional funds for land conservation easements and land purchases. Up to \$5 million per year (subject to the availability) may be used to fund the purchase of perpetual conservations land easements and fee simple land purchases that can help to maintain or improve water quality with environmental structural enhancements and/or use restrictions.

Select communities will be encouraged to enter into partnership agreements with the Delaware Department of Agriculture's Forestland Conservation Program (DDA), and DNREC (Divisions of Parks and Recreation, and/or Fish and Wildlife). After a partnership agreement has been established, communities will be able to borrow funds for land conservation projects in addition to their wastewater project loans. The CWSRF interest rate for wastewater loans will be reduced to ensure that communities will not pay any additional loan debt service for both loans combined, annually or over the life of the loans.

Memorandums of Agreement have been signed between DNREC and DDA, and Environmental Finance and the Division of Parks and Recreation, and the Division of Fish and Wildlife for the implementation of the LCLP.

Borrowers can select to waive their eligibility to use the additional borrowing capacity under the LCLP and still receive a lower interest rate for their wastewater loan; however, the original wastewater loan cannot be prepaid. At DNREC discretion, the additional borrowing capacity may be offered to other potential borrowers at a zero percent (0%) interest rate, however, the loan term cannot exceed the loan term for the original wastewater loan. The original wastewater loan must be closed first before the LCLP loan can be closed.

#### Water Quality Improvement Loan Sponsorship Program

Similar to the LCLP, the Water Quality Improvement Loan Sponsorship Program (WQILP) is designed to fund water quality improvements with CWSRF wastewater loans. Proposed projects will improve water quality using Green Infrastructure and/or

Environmentally Innovative approaches. Environmental Finance and the Division of Watershed Stewardship will implement the program.

- Wastewater and proposed WQILP projects must be on the CWSRF Project Priority List (PPL)
- Loan debt service payments for both wastewater and WQILP projects will be equal to the wastewater project by itself for the term of the loan
- WQILP project must have demonstrated water quality improvement benefits and be managed for the life of the improvement
- WQILP project applicants must enter into a Water Quality Improvement Agreement with the DNREC's Division of Watershed Stewardship. Some projects will require a Conservation Easement with DNREC's, Division of Parks and Recreation, or Division of Fish and Wildlife
- DNREC's Division of Parks and Recreation and Division of Fish and Wildlife are authorized to acquire open space and conservation easements under the Delaware Land Protection Act, pursuant to 7 Del C. Ch. 75, §7503

Water Quality Improvement Loan Program – How Does It Work?

### Environmental Finance

Project Solicitation and Review:

- Notice-of-Intent solicitation from municipalities including WQILP project interest
- CWSRF Project Priority List (PPL) and Intended Use Plan (IUP) developed
- Municipal and WQILP project loan applications solicited from approved PPL

Financial Review and Interest Rate Determination:

- Environmental and Financial Reviews of loan applications conducted
- Evaluation of Interest Rate for proposed Wastewater and WQILP loans are conducted to ensure annual combine loan debt service will be equal to the municipal wastewater project separately
- Coordinates Internal Processing and Approvals, Loan Closings with Applicants, the Division of Watershed Stewardship, and Other Partners as Necessary

### Division of Watershed Stewardship

WQILP Marketing, and Project Loan Application Review

- Assist with Marketing of WQILP to Potential Applicants
- Review WQILP Project Loan Applications relative to Program Criteria, and Ranking of Water Improvement Potential
- Work with Loan Applicants to develop WQILP Project Contractual Agreements

### WQILP Criteria

There must be demonstrated water quality benefits associated with proposed projects.

Proposed projects must exhibit at least one or more of the following:

- Project must incorporate green infrastructure and /or be environmentally innovative;

Examples of eligible projects include:

- Implementation of green streets (combination of infrastructure practices in transportation rights-of-way) for new development, redevelopment, or retrofits;
- Implementation of wet weather management systems for parking areas which include: the incremental cost of porous pavement, bioretention, trees, green roofs and other practices that mimic natural hydrology and reduce effective imperviousness at one or more scales;
- Equipment to maintain green streets, vector trucks and other equipment (Will be contingent upon contractual arrangement with Environmental Finance and the Division of Watershed Stewardship);
- Implementation of water harvesting and reuse programs or projects, including reuses that reduce energy consumption, recharge aquifers and reduce water withdrawals and treatment costs;
- Downspout disconnection to remove stormwater from combined sewers and storm sewers;
- Comprehensive retrofit programs designed to keep wet weather out of all types of sewer systems using green infrastructure technologies and approaches;
- Implementation of comprehensive street tree or urban forestry programs, including expansion of tree box sizes to manage additional stormwater and enhance tree health;
- Establishment and restoration of riparian buffers, floodplains, wetlands, living shorelines, and other natural features (will require a conservation easement on the project area);
- Purchase or easement of conservation areas (existing wetlands or forested areas, or agricultural lands, or previously developed areas to be restored to natural habitat, or improved with green infrastructure);
- Decentralized wastewater treatment solutions to existing deficient or failing on site systems;
- The water quality portion of projects that employ development and redevelopment practices that preserve or restore site hydrologic processes through sustainable landscaping and site design;
- Projects that use water balance approaches (water budgets) at the project, local or state level that preserve site, local or regional hydrology;
- Projects that retrofit or replace irrigation systems with more efficient systems and/or those that include water reuse or harvesting;
- The water quality portion of a LEED certified building.

Examples of ineligible projects include:

- Stormwater conveyance systems that are not soil/vegetation based;

- Stormwater pipes and concrete channels;
- Hardening, channelizing or straightening streams and/or stream banks;
- In-line or end-of-pipe treatment systems that only filter or detain stormwater;
- Stormwater ponds with extended detention and /or filtration;
- Stormwater controls with impervious or semi-impervious liners with no evapotranspiration or harvesting functions;
- Underwater stormwater control (swirl concentrators, hydrodynamic separators, baffle system for grit, trash/floatables removal, oil and grease, dams for in-line underground storage and flow diversion);
- Street sweepers, sewer cleaners and vacuum trucks (unless they support green infrastructure projects).

Borrowers can select to waive their eligibility to use the additional borrowing capacity under the WQILP and still receive a lower interest rate for their wastewater loan; however, the original wastewater loan cannot be prepaid. At DNREC discretion, the additional borrowing capacity may be offered to other potential borrowers at a zero percent (0%) interest rate, however, the loan term cannot exceed the loan term for the original wastewater loan. The original wastewater loan must be closed first before the WQILP loan can be closed.

## **XI. Minority Business Enterprises/Women’s Business Enterprises**

The WPCRF will use the EPA approved Minority Business Enterprises and Women-owned Business Enterprises (referred to as Disadvantage Business Enterprise) (M/WBE/DBE) utilization objectives for the FY 2017 Grant unless revised objectives are promulgated. These objectives are as follows:

	MBE	WBE
Construction	9.44%	8.86%
Good/Equipment Combined	7.84%	17.65%
Services	3.80%	5.67%
Supplies	1.79%	3.41%

The M/WBE/DBE program requires borrowers to provide adequate opportunity for M/WBE participation in contracts. Borrowers/contractors must show a good faith effort, consistent with the six affirmative steps outlined in 2 CFR Part 200.321, even if the objectives cannot be met in obtaining M/WBE participation.

Environmental Finance provides borrowers with a statement for inclusion in procurement/bid documents, which outlines the M/WBE/DBE objective and the affirmative steps necessary to show a good faith effort. Failure to meet the M/WBE/DBE objective does not preclude the use of the WPCRF, as long as the good faith effort can be demonstrated. Environmental Finance may modify its program implementation policies to comply with the above fair share objective after discussion with EPA. While compliance with M/WBE/DBE is mandatory in the CWSRF program for equivalency projects, it is not for non-equivalency projects or sub-projects. In order to comply with the M/WBE/DBE requirements, the State will limit identification of equivalency projects to an amount equal to the federal SRF capitalization grants – rather than apply the

M/WBE/DBE requirements to all projects. The State will limit equivalency funds to a small number of large SRF projects, funding only the construction phase(s) of those projects.

Equivalency Project:

The proposed City of Rehoboth Beach Ocean Outfall Project (\$25.0m) or WWTP Upgrade Project (\$10.48m) or WWTP Biosolids Project (\$12.5m) will be used as the equivalency project if loan closing occurs before June 30, 2017. Back up equivalency projects will be based estimated project costs that are closed before the end of the state fiscal year.

**XII. WPCRF Financial Status**

The U.S. EPA Program Evaluation Report (PER) for FY 2016 was issued and sent to DNREC on June 7, 2017.

**XIII. Public Review and Comment**

A Press Release was posted to DNREC's web site on October 17, 2017 informing the public of a Public Hearing. The Water Infrastructure Advisory Council will meet on October 18, 2017 to review, approve, and recommend the Revised FY 2017 PPL and IUP; subject to no adverse public comments received by the close of the public record on November 20, 2017, no adverse public comments were received.

**XIV. Assurances**

Required Reporting

Delaware will enter all projects funded into the CWSRF Benefits Reporting System on an ongoing basis.

Environmental and Financial Reviews

Delaware will meet environmental review requirements by complying with Section IV, paragraph G, of the Operating Agreement between the State of Delaware and the EPA, and Section V of the Regulations Governing the Administration of the WPCRF.

Binding Commitments

Delaware will enter into binding commitments equal to at least one hundred twenty percent (120%) of each quarterly payment within one (1) year of receipt of that payment.

Expeditious and Timely Expenditures

To help ensure that more loans close on time and projects are completed as soon as possible, assistance has been made available to communities from the CWSRF Non-Federal Administrative Account. The following is an overview of the various incentive grants to facilitate CWSRF loan demand. To help Delaware expend all CWSRF funds in an expeditious and timely manner consistent with the rules and regulations governing the program, an open solicitation NOI process is also being considered.

- Wastewater Match Planning Grants – \$50k per project is available for feasibility studies to identify and evaluate wastewater needs, requires a cash match;

- Surfacewater Matching Planning Grants – \$50k per project is available for feasibility studies to identify and evaluate surface water management needs, requires a cash match;
- Project Planning Advances – \$100k per project is available for the development of required PERs and EIDs necessary to apply for a CWSRF loan; \$50k is forgiven and \$50k is applied to the CWSRF loan when closed. If a CWSRF does not close, the entire \$100k is forgiven;
- Asset Management Plan Development Incentives – \$100k grant is available to assist with the development of an asset management plan. After the plan has been completed ½ of the interest charged on new CWSRF loan is rebated back annually for up to 5 years;
- Additional Subsidization for Low-Income Subgroups – \$200k over a period of 5 years is available to assist low-income residents with paying sewer bills up to \$200 per household (based on closed CWSRF loans) and can be combined with other available subsidies;
- WIAC Subcommittee – this Subcommittee was formed to discuss and facilitate a path forward for helping CWSRF loans close on time, and to help ensure that closed projects are completed on time. Subcommittee recommendations will be made to the full WIAC for consideration and implementation.

#### First Use for Enforceable Requirements Certification

Delaware certifies that all of its municipal facilities are in substantial compliance with their current NPDES permits.

#### Loan Defaults

Delaware will make every effort to assure that loan recipients repay their loans. In the event of any defaults, DNREC will review the borrower’s user charges and budget and make recommendations for assuring continued loan repayment. DNREC will continue its loan default program agreement with the Delaware Division of Revenue.

#### Program Pace Requirement

The indicator for program pace, “Loans as a Percentage of Funds Available,” is calculated by dividing the total amount of executed loans by the total amount of funds available for projects. This indicator shows whether a state is using its available funds in an expeditious and timely manner. It compares the amount of closed loans to the total amount of funds available. One of the WPCRF’s short-term goals is to maintain a cumulative program pace that exceeds 95 percent for signed binding loan commitments.

### **XV. CWSRF and DWSRF Federal Fund Transferability**

Delaware reserves the right to transfer Capitalization Grant and loan repayment monies between the State’s WPCRF and Safe Drinking Water Revolving Loan Fund programs as necessary to ensure the full utilization of the federal assistance.

### **XVI. CWSRF Municipal and Green Projects - Funding List**

Attachment A provides a list of wastewater and green projects that will be funded with CWSRF funds. The list includes the FFY 2017 PPL Rank Order, PPL Year, PPL Score,

Applicant Name, Project Name, Population Served, Waterbody/NPDES Permit, Total Project Cost, CWSRF Financing, and Type of Assistance.

## **XVII. Non – Federal Administration Account**

Delaware has established a Non-Federal Administration Account (NFAA) funded by 1/2 administrative fee charged on WPCRF municipal loans. The fee is collected from the interest portion of municipal loan repayments over the term of each loan. The NFAA is accounted for and managed separately from the corpus of the WPCRF. Funds in the NFAA are not considered WPCRF program income due to the fact that federal capitalization grants that originally funded the loans are closed-out prior to receiving fees from completed projects.

Historically, the NFAA has been used to supplement the program administration allowance associated with each federal capitalization grant, and to fund the salary for a contractual position within the Division of Water Holding Tank Enforcement program. The NFAA is now used for a number of innovative water quality programs that in part help to facilitate new CWSRF loan demand. The planned uses are consistent with EPA's Guidance on Fees Charged by States to Recipients of CWSRF Program Assistance, 40 CRF Part 35. Attachment B lists the revenue sources and proposed program uses of the NFAA for SFY 2012 through SFY 2016 (Actual), SRF 2017 through SFY 2020 (Projected).

The NFAA ended SFY 2017 with an Available Balance of \$3,115,797; projected Total Annual Revenues for SFY 2018 are \$2,416,782; and Total CWSRF NFAA Expenses are \$3,691,000. The projected Annual Available Fund Balance for SRF 2018 is \$2,024,000. The following is a list of the SFY 2017 current and planned uses for the NFAA. A conservative estimate of the NFAA revenue and planned uses are listed in Attachment B.

- Environmental Finance Administrative Expenses
- Contractual Groundwater Position
- Contractual Stormwater Position
- 6 Division of Water Positions
- CWSRF 20% State Match (if necessary)
- SEFO Program (Due-On-Transfer Septic Extended Funding Option Program)
- Community Water Quality Improvement Grants
- Wastewater Matching Planning Grants
- Stormwater Matching Planning Grants
- Wastewater Asset Management Incentive Program Grants
- Asset Management Planning Grants

The NFAA is reviewed annually to ensure its sustainability before additional uses are considered. The WPCRF's Annual Report includes a description of the NFAA, fees charged, actual use, and the remaining balance in the account.

## **XVIII. APPENDIX**

Revised FY 2017 CWSRF Municipal Wastewater and GPR Projects –

Funding List  
Non – Federal Administration Account – Current and Planned Uses  
Source and Use of Funds - FY 2017 WPCRF Intended Use Plan  
Cumulative Binding Commitments and Disbursements  
FFY 2017 ACH Payment Schedule

Attachment A  
Attachment B  
Attachment C  
Attachment D  
Attachment E

## Attachment A - FY 2017 CWSRF Wastewater and GPR Projects - Funding List

### FY 2017 CWSRF Wastewater Projects

IUP Rank Order	PPL Year	PPL Score	Applicant	Project Name	Population Served	Waterbody / NPDES Permit	Total Project Cost	GPR Category	GPR Eligibility	CWRF Financing	Type of Assistance
1	2017	N/A	New Castle County Department of Special Services	Christiana River Force Main Emergency Repair	220,000	Piedmont - Christina River DE0020320	\$10,600,000	N/A	N/A	\$10,000,000	Loan / Subsidies TBD

**Description of Project and Problem:** New Castle County submitted an emergency funding request for the Christina River Force Main (CRFM) Emergency Repair. The CRFM is New Castle County's most critical infrastructure, stretching approximately 9.5 miles, ranging in size from 66 inches to 84 inches and servicing over 200,000 residents. The low pressure force main was constructed using pre-stressed cylinder concrete pipe (PCCP), starting in the early 1970s and ending in the early 1980s, and is considered at the halfway point of its 80-year design life. In late July of this year, divers performing work at the Wilmington Treatment Plant discovered a large section of concrete (approximately 7' x 3' x 2" thick) in the headworks. The section of concrete appeared to be a section of the CRFM's inner concrete liner. In late August, divers entered the sewer at the head works of the treatment plant, and traversed into the CRFM in an attempt to locate the origin of the concrete. At approximately 1,000 feet upstream of the treatment plant, the divers discovered what appears to be the point where the piece of concrete broke free of the pipe. Based on the results of the investigation, and the consequence of failure, New Castle County is currently preparing for the repair of the CRFM at this location, to ensure the health, safety and welfare of the public. In order to expedite the repair, materials with long lead times are already on order. The most critical task is establishing a bypass of the CRFM just upstream of this location. New Castle County is already coordinating with affected property and utility owners. Once a bypass is established, the pipe can be exposed, the damage visually assessed and the best means of repair determined. Due to the cost of establishing a bypass, New Castle County intends to perform additional investigation of the pipe and may perform other repairs as needed. We estimate the final design for this project will be completed by October 2017, with emergency bid documents ready in November 2017. The bypass will be established by December 2017, and a contractor mobilized as quickly as possible. Depending on the means of repair, construction is expected to take approximately 6 months.

2	2015	74	City of Newark	Western Area Drainage Ditch Flood Mitigation	30,000	Piedmont - Christina River N/A	\$10,000,000	N/A	N/A	\$10,000,000	Loan / Subsidies TBD
---	------	----	----------------	---	--------	-----------------------------------	--------------	-----	-----	--------------	----------------------------

**Description of Project and Problem:** The areas draining to and along the Western Area Drainage Ditch and the surrounding areas suffer from repetitive small stream flooding during high intensity rain events. The University of Delaware has indicated they intend to vacate and sell the Rodney Dormitories at the end of the 2015 school year. It is ideally located in the drainage area and if retrofitted with a stormwater detention basin, will significantly reduce the amount of water entering the areas that flood. The City is looking at purchasing the property, demolishing the buildings and creating a stormwater management pond and other recreational features. Additionally, the City owns several park properties in this drainage area that can be converted to stormwater features to further reduce flooding and improve water quality.

3	2016	87.5	City of Dover	Meeting House Branch Environmental Restoration	37,540	DE Bay & Estuary - St. Jones River NPDES Permit No. DE00051161	\$8,203,542	N/A	N/A	\$7,600,000	Loan / Subsidies TBD	
<p><b>Description of Project and Problem:</b> Due to environmental concerns, the PWll site will be redeveloped to increase stormwater quality entering the St. Jones River. The improvements include demolishing the existing greenhouse, grounds office, and equipment garage (including small engine repair), and improving the existing Tar Ditch stormwater system from South Governors Avenue down to the St. Jones River. The existing water production well will remain on the old PWll site, but the rest of the City-owned land will be converted to a constructed wetland. The existing stormwater system located in downtown Dover, known as the tar ditch stormwater system, is undersized and negatively impacting the surface water quality of the St. Jones River. The stormwater system was constructed in downtown Dover in the early 1930s with an approximate drainage area of 63 acres. The stormwater system varies in material and size, but is typically comprised of 48-inch RCP and a 4 foot by 4 foot box culvert. The primary drainage area consists of urbanized landscape without stormwater quality management devices. In the St. Jones River Watershed Study, published in 2012 by the Department of Natural Resources Environmental Control (DNREC), the watershed was examined and recommendations were made on reducing pollutants into the St. Jones River. The results of the study found that nitrogen, phosphorous, and bacteria loads were still above the acceptable limits. The surface water runoff, aging stormwater infrastructure, and the need for increased water quality have made improvement to the stormwater system a priority for the City of Dover Department of Public Works (DPW). In coordination with engineer consultant AECOM, a design had been developed for the demolition of old PWll and the construction of a upgraded stormwater piping system, open channel, and a 3.52 acre constructed wetland with diversion structure. The design phase of the project was supplemented by a surface water matching planning grant through DNREC. This design includes construction drawings and bid specifications, permitting, and site investigations to determine existing subsurface conditions. At project completion there will be a land conservation sponsorship of the wetlands area by obtaining a Wetlands Conservation Easement by the City of Dover.</p>												
4	2016	60	New Castle County Department of Special Services	Hunter's Ridge	600,000	Piedmont - White Clay Creek	0	\$350,000	N/A	N/A	\$350,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The existing basin, located in the private open space of the Hunter's Ridge subdivision, was originally constructed in approximately 1997. The upstream drainage area is approximately 35 acres of runoff from the the residential community which consists of homes, turf lawns, and subdivision streets. This project was identified for modification due to the major amount of sediment accumulation repairs needed. The modifications will include retrofit the existing basin to establish more volume though sediment removal and enhance pollutant removal. The upstream portion from Haystack Drive leading to the pond will include stream bank stabilization and the transition from the stilling basin back to the existing stream channel to protect the stream and reduce</p>												
5	2016	60	New Castle County Department of Special Services	Perch Creek Pond #1	600,000	Piedmont - Christina River	N/A	\$265,000	N/A	N/A	\$265,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The existing wet pond was originally constructed in 1995 and receives approximately 12 acres of runoff from the residential community which consists of homes, turf lawns, and subdivision streets located in Perch Creek on the south side of Pulaski Highway (U.S. Rt. 40). This project was identified for modification due to the major list of repairs. The modifications will include the construction of a new concrete outlet structure for extended detention, construction of a new rock forebay for sediment collection, and the enhancement of water quality through the creation of a bioretention / rain garden that will collect and treat portions of the drainage area for TMDL's.</p>												
6	2016	40	New Castle County Department of Special Services	Morningside	600,000	Piedmont - White Clay Creek	N/A	\$250,000	N/A	N/A	\$250,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The existing dry pond was originally constructed in 1988 and receives approximately 144.95 acres of runoff. The Morningside basin discharges into a creek which flows through private property to the east (and not within Morningside) before flowing into a culvert under Upper Pike Creek Road and then into Pike Creek. The creek, tributary to Pike Creek, receiving the runoff from the Morningside basin is experiencing significant erosion potentially due to the basin not detaining peak flows adequately. It is anticipated that retrofitting of the Morningside basin will improve current functionality. Additionally, the modifications will include construction of a new outlet structure and outlet pipes, modifying the basin to include additional storage capacity, and utilization of an energy dissipater at the discharge point into the stream.</p>												

7	2016	30	Kent County Levy Court	PLANT WIDE BACKUP (EMERGENCY) POWER	130,000	DE Bay & Estuary - Murderkill River NPDES DE 0020338	\$3,747,400	N/A	N/A	\$1,237,400	Loan / Subsidies TBD
---	------	----	------------------------	-------------------------------------	---------	---	-------------	-----	-----	-------------	-------------------------

**Description of Project and Problem:** The Kent County Regional Resource Recovery Facility (KCRRRF), owned by Kent County Levy Court, is an advanced wastewater treatment facility located in Milford, DE. It serves every major municipality within the County, multiple districts within the County, and also portions of New Castle and Sussex Counties through contract users. Kent County works closely with the municipalities within the service area to provide an organized and coordinated approach to wastewater collection, conveyance and treatment. This coordinated effort encourages growth and development near existing infrastructure in accordance with the State Strategies for Policies and Spending. The KCRRRF operates under a Sustainability Management System (SMS), which is a set of management processes and procedures that allow an organization to analyze, control and reduce the environmental impacts and employee health and safety risks of its activities, products and services and operate with greater overall efficiency and control. Under this system, the County has already identified and implemented several energy efficiency modifications to the facility in order to reduce its environmental impact and improve the sustainability of the operations. The WTF Capacity Expansion & Nutrient Removal Upgrade Project which is currently under construction has multiple components: a) Capacity Expansion and Nutrient Removal and b) Air Blower System Optimization. The Air Blower System Optimization component addresses the efficiency of the blowers used in the treatment process. During the evaluation of the air (blower) system, an opportunity was identified to eliminate individual power back-up systems and replace them with a plant-wide power back-up system. The plant-wide single backup system would replace individual power back-up systems. This change would significantly reduce operation and maintenance costs as well as air pollution. Thus, the plant-wide power back-up was added to the Air Blower System Optimization component in 2014. Under the Capacity Expansion Project, a strategy was employed where SRF loan funding would pay for the equipment procurement and the USDA/RD funding would pay for all construction activities. An estimated \$1,402,600 in SRF funds remaining after the procurement component for the Capacity Expansion and Nutrient Removal component. Additional funds are required for the purchase of blowers and the plant wide generator. A separate Notice of Intent has been completed for the Air (Blower) System Optimization Project. This application is for the Plant-wide Power Backup Project and associated electrical upgrades.

8	2016	25	New Castle County Department of Special Services	The Muddy 6 Sanitary Sewer Capacity Improvements	4,700	Chesapeake Bay - C & D Canal West N.A.	\$2,000,000	N/A	N/A	\$2,000,000	Loan / Subsidies TBD
---	------	----	--	--	-------	---	-------------	-----	-----	-------------	-------------------------

**Description of Project and Problem:** New Castle County (owner) is submitting a Notice of Intent for a loan request for the project known as the Muddy 6 Sanitary Sewer Capacity Improvements. Based on results submitted by our engineer in 2011, Johnson, Mirmiran & Thompson (JMT), a portion of the Muddy 6 sewers have been identified as having limited capacity during minor storm events. Since 2011, JMT has further evaluated the trunkline and identified capacity constraints in the system that require improvements to allow future development; improve the level of service to our customers; and reduce the risk of violating the Clean Water Act. This evaluation included temporary flow monitoring, hydraulic model, and alternatives evaluation. In addition to the study performed by our consultant, the County Capacity Planning Tool (CPT) also shows capacity restrictions in this portion of the sub-basin. For future development to occur within the sub-basin these upgrades to the trunkline are necessary. JMT has developed preliminary plans (30%) under an existing task that illustrates the capacity requirements to meet the specified level of service for the basin. The County is now seeking full design phase for bid documents and construction to alleviate the capacity restraints. We estimate our planning for this project will be completed by December 2016. Full design will be completed within 6 months or by July 2017 and is estimated to be approximately \$ 280,000. Funding for this construction project is part of the FY 2018 County budget, which is estimated at approximately \$1,720,000. Therefore, the County is requesting a loan for approximately \$ 2,000,000 for design fees and construction fees to complete this project.

9	2016	55	City of Dover	Walker Woods Pump Station Replacement	286	Delaware Bay & Estuary - St. Jones River DE00051161	\$460,000	N/A	N/A	\$408,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The City of Dover Department of Public Works (DPW) has developed a Wastewater Master Plan (2009) and mapped its wastewater collection system utilizing the program Arc Geographic Information Systems (ArcGIS). The City placed wastewater infrastructure on a replacement schedule based on useful life and vulnerability to failure. The Walker Woods Pump Station #30 Replacement Project was budgeted to begin FY 2017 and to be completed in FY 2020, having met City Council approval. The DPW created a five (5) year Capital Investments Plan (CIP) to allocate funds to projects requiring rehabilitation and/or replacement. This project calls for replacement of the Smith &amp; Loveless package pumping station installed in 1989 in order to handle development in the area, as well as a complete rehabilitation of the wet well inside the pump station using a poly-triplex system liner. Replacing the aged station with a completely new station will prevent the need for costly unbudgeted repairs to maintain operation, thus reducing the possibility of a sewage spill into waterway or backup in a residence due to pump failure. The station has exceeded its life expectancy of 20-25 years and will need a capacity upgrade to handle anticipated growth in the basin. The City of Dover believes there is currently inflow and infiltration entering the wetwell due to the age of the system. The degree of infiltration is unknown until an inspection of the wetwell is performed. The City believes that the new station will achieve a 20% reduction in energy consumption through use of new technologies such as variable frequency drives and more efficient motors to meet EPA's definition of Energy Efficiency as outline in the "2010 Clean Water and Drinking Water State Revolving Fund Green Project Reserve: Guidance for Determining Eligibility-April 21, 2010".</p>											
10	2016	50	Kent County Levy Court	Air System (Blower) Optimization Project	130,000	Delaware Bay & Estuary - Murderkill River NPDES DE 0020338	\$4,513,700	N/A	N/A	\$1,354,110	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> Feasibility Study/Preliminary Design Phase: The County commissioned Hazen and Sawyer, P.C. to prepare a Preliminary Engineering Report (PER) to the study of the existing blower system and to identify potential upgrades that could result in significant energy savings. The scope of work for implementing the aeration system optimizations included: (1) a detailed study of the existing system and (2) identification of potential upgrade options. Operational data was reviewed to develop annual and seasonal aeration needs for both the current and future flows at the facility. Blower technologies were reviewed and compared to identify advantages and disadvantages of each. Control system options and electrical system options were also evaluated. Alternatives were developed for aeration system optimization. The results of this study by Hazen and Sawyer, P.C. indicate that a significant energy savings (20-25%) can be realized by replacing two of the existing multistage blowers with similarly sized turbo blowers. The project improvements require replacement of two existing blowers with two turbo blowers, piping modifications, electrical/control improvements, and minor improvements to the existing blower building. Design documents (up to 80% completion level) were then developed. The planning and design for this project was implemented using a DNREC Wastewater Matching Planning Grant to reach 80% design level as initial funding. Once appropriate funding sources are secured, the project may proceed through design completion and construction.</p>											
11	2016	50	City of Dover	Delaware Tech Pump Station Replacement	185	DE Bay & Estuary - St. Jones River DE00051161	\$436,000	N/A	N/A	\$384,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The City of Dover Department of Public Works (DPW) has developed a Wastewater Master Plan (2009) and mapped its wastewater collection system utilizing the program Arc Geographic Information Systems (ArcGIS). The City placed wastewater infrastructure on a replacement schedule based on useful life and vulnerability to failure. The Delaware Tech Pump Station Replacement Project has been budgeted to begin FY 2017 and to be completed in FY 2018, having met City Council approval. This project calls for replacement of the Smith &amp; Loveless package pumping station installed in 1975 in order to handle the increased flows from the area. The station has exceeded its anticipated life expectancy of 20-25 years and is in need of a capacity upgrade due to anticipated flow increases. The DPW has created a five (5) year Capital Investments Plan (CIP) to allocate funds to projects requiring rehabilitation and/or replacement. Replacing the aged station with a completely new station will prevent the need for costly unbudgeted repairs to maintain operation, thus reducing pump failure resulting in a sewage spill into waterway or backup in a residence. In addition, due to the age of the pump station, certain parts are no longer obtainable and replacement of equipment is costly. The original station built in 1975 has exceeded its original life expectancy. The City believes that the new station will achieve a 20% reduction in energy consumption through use of new technologies such as variable frequency drives to meet EPA's definition of Energy Efficiency as outline in the "2010 Clean Water and Drinking Water State Revolving Fund Green Project Reserve: Guidance for Determining Eligibility - April 21, 2010".</p>											

12	2016	40	City of Dover	Lepore Road Sanitary Sewer Upgrade	400	DE Bay & Estuary - St. Jones River NPDES DE00051161	\$300,000	N/A	N/A	\$250,000	Loan / Subsidies TBD
<p><u>Description of Project and Problem:</u> The City of Dover Department of Public Works (DPW) has developed a Wastewater Master Plan (2009) and mapped its wastewater collection system utilizing the program Arc Geographic Information Systems (ArcGIS). The City placed wastewater infrastructure on a replacement schedule based on useful life and vulnerability to failure. The Lepore Road Sanitary Sewer Upgrade Project has been budgeted to begin FY 2017 and to be completed in FY 2018, having met City Council approval. The DPW has created a five (5) year Capital Investments Plan (CIP) to allocate funds to projects requiring rehabilitation and/or replacement. This project calls for the replacement of approximately 374 linear feet of 8 inch gravity sewer main. Currently, the sewer main operates in a reverse slope condition, which overloads the pipe. The proposed upgrade will provide proper slope and adequate capacity for current flow to be carried to discharge. Delaying this project will leave the City of Dover vulnerable to environmental issues with sewage surcharging onto the ground. Additionally, not addressing this issue could result in sewage backups to residences.</p>											
13	2016	50	City of Dover	Silver Lake Pump Station Replacement	193	DE Bay & Estuary - St. Jones River DE00051161	\$448,000	N/A	N/A	\$396,000	Loan / Subsidies TBD
<p><u>Description of Project and Problem:</u> The City of Dover Department of Public Works (DPW) has developed a Wastewater Master Plan (2009) and mapped its wastewater collection system utilizing the program Arc Geographic Information Systems (ArcGIS). The City placed wastewater infrastructure on a replacement schedule based on useful life and vulnerability to failure. The Silver Lake Pump Station Replacement Project has been budgeted to begin FY 2018 and to be completed in Fiscal Year 2019, having met City Council approval. This project calls for replacement of the Smith &amp; Loveless package pumping station installed in 1982 in order to handle development in the area, as well as completely rehabilitate the wet well side of the pump station using a poly-triplex system liner. The station has exceeded its anticipated life expectancy of 20-25 years and is in need of a capacity upgrade to handle anticipated growth in the basin. The DPW has created a five (5) year Capital Investments Plan (CIP) to allocate funds to projects requiring rehabilitation and/or replacement. Replacing the aged station with a completely new station will prevent the need for costly unbudgeted repairs to maintain operation, thus reducing pump failure resulting in a sewage spill into waterway or backup in a residence. In addition, due to the age of the pump station, certain parts are no longer obtainable and replacement of equipment is costly. The original station built in 1982 has exceeded its original life expectancy. The City believes that the new station will achieve a 20% reduction in energy consumption through use of new technologies such as variable frequency drives to meet EPA's definition of Energy Efficiency as outline in the "2010 Clean Water and Drinking Water State Revolving Fund Green Project Reserve: Guidance for Determining Eligibility-April 21, 2010".</p>											
14	2016	40	City of Dover	Tar Ditch Interceptor	11,621	DE Bay & Estuary - St. Jones River NPDES Permit No. DE00051161	\$250,000	N/A	N/A	\$250,000	Loan / Subsidies TBD
<p><u>Description of Project and Problem:</u> The City of Dover Department of Public Works (DPW) has developed a Wastewater Master Plan (2009) and mapped its wastewater collection system utilizing the program Arc Geographic Information Systems (ArcGIS). The City placed wastewater infrastructure on a replacement schedule based on useful life and vulnerability to failure. The Tar Ditch Interceptor Project has been budgeted to be completed in FY 2018, pending City Council approval. This project, identified in the 2009 Wastewater Master Plan, requires approximately 300 linear feet (300') of fifteen inch (15") gravity sanitary sewer to be replaced. It has been identified that the subject pipe is flowing with a reverse slope, which can cause a surcharge during peak flow periods. The DPW has created a five (5) year Capital Investments Plan (CIP) to allocate funds to projects requiring rehabilitation and/or replacement. Delaying this project will result in preventing growth, as well as leave the City of Dover vulnerable to environmental issues with sewage surcharging onto the ground. Additionally, not addressing this issue could result in sewage backups to residences.</p>											

15	2017	77	Sussex County Council	Chapel Branch	1,523	Inland Bays - Rehoboth Bay WPCC-3042C-90 (Spray Irrigation)	\$3,744,323	N/A	N/A	\$3,744,323	Loan / Subsidies TBD
<p>Description of Project and Problem: This project will upgrade existing pump stations in the (2) communities of Chapel Green and Oak Crest Fanns and install a FM to the County's Inland Bays Regional Wastewater Facility (IBRWF). The existing on-site privately owned systems for these two communities and the individual septic systems for the connecting parcels will be taken offline and abandoned. Wastewater will be pumped to IBRWF for treatment and disposal. The County held a Public Hearing and Referendum to establish the district and the results were positive for connecting to the County run system. Water Pollution Control Needs/Environmental Benefits: This is a septic elimination project to continue Sussex County's efforts to serve existing developments/homes and eliminate existing septic systems. This project will eliminate (2) privately owned on-site systems as well as multiple on-site septic systems for the connecting properties. Both communities would have been required to perform significant upgrades if this project did not proceed.</p>											
16	2017	73	Sussex County Council	Western Sussex Sanitary Sewer District	7,000	Chesapeake Bay - Nanticoke River DE 0020249	\$12,700,000	N/A	N/A	\$12,700,000	Loan / Subsidies TBD
<p>Description of Project and Problem: The Town of Bridgeville currently owns and operates a sanitary sewer system for the Bridgeville/Greenwood service area. In May of 2016, the Commissioners of Bridgeville signed the Administrative Order of Consent with the US EPA mandating system improvements on tight timelines. Due to the significant rate impact, the Town Commissioners delayed the associated referendum on the borrowing. In order to move the issue forward, the municipal councils of Bridgeville and Greenwood requested Sussex County to investigate an alternate scenario in February of 2017. Sussex County, in conjunction with the respective municipal engineering consultants, developed an alternate scenario for a Western Sussex County Sewer District connecting to the City of Seaford. The City of Seaford's Council has agreed in principle to the outlined arrangement including a full buy-in for the existing municipal systems as they exist today, including any remaining legacy obligations conditioned upon the nutrient load allocation transfer under the Chesapeake TMDL. The County has initiated this load transfer request, and it is supported by DNREC and EPA. Sussex County would assume all municipal sewer related assets, liabilities and legacy obligations after district expansion. Water Pollution Control Needs/Environmental Benefits: This will take the aging Bridgeville Treatment off-line and send the flows from Greenwood and Bridgeville to the City of Seaford where the effluent can be treated to a higher level and disposed in the Nanticoke. Though still disposed of in the river, the discharge point will be further downstream lessening the environmental impact to the more sensitive upstream portion of the river.</p>											
17	2017	70	New Castle County Department of Special Services	Hockessin Greene	200	Piedmont - Christina River Not applicable (N/A)	\$372,000	N/A	N/A	\$350,000	Loan / Subsidies TBD
<p>Description of Project and Problem: The existing dry basin, located in the private open space of the Hockessin Greene subdivision, was originally constructed in approximately 1991. The upstream drainage area is approximately 33 acres of runoff from the the residential community which consists of homes, turf lawns, and subdivision streets. This runoff discharges behind the Lantana Square Shopping Center then into drainage easement within the community of Hockessin Valley Falls ultimately reaching an unnamed tributary of the Mill Creek. This project is in need of repairs due to the major amount of sediment accumulation, metal outlet pipe deterioration, and conflict with sanitary sewer line. These modifications will include the construction of a new concrete outlet structure and outlet barrel for extended detention, construction of a new rock forebay for sediment collection, an outlet pipe stilling basin to protect the off-site drainage channel to reduce sediment migration, and the enhancement of vegetation through the creation of a designed landscape plan that will collect and treat portions of the drainage area for TMDL's.</p>											
18	2017	69	Sussex County Council	Joy Beach	333	Inland Bays - Rehoboth Bay WPCC-3042C-90 (Spray Irrigation)	\$4,500,000	N/A	N/A	\$4,500,000	Loan / Subsidies TBD
<p>Description of Project and Problem: Install gravity collection system, pump station and forcemain to serve existing subdivisions and individual parcels in the Joy Beach Area. Sussex County is in the process of annexing the area into the Sussex County Unified Sanitary Sewer District. Water Pollution Control Needs/Environmental Benefits: This is a septic elimination project to continue Sussex County's efforts to serve existing developments/homes and to eliminate existing septic systems. There have been multiple requests from residents in the Joy Beach area to provide a county operated sewer system. These requests include reports of failing septic and possibly cistern systems. These parcels are adjacent to the Rehoboth Bay.</p>											

19	2017	68	Sussex County Council	Branch, Autumn, and Tucks Road - Long Neck	340	Inland Bays - Rehoboth Bay WPCC-3042C-90 (Spray Irrigation)	\$800,000	N/A	N/A	\$800,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> Install a gravity collection system for Branch and Autumn Roads to regional infrastructure currently under construction by the developer of the Deerbrooke Subdivision. A district boundary extension is currently in process to annex the Tucks Road parcels into the Sussex County Unified Sanitary Sewer District. This project will also install a gravity collection system in Tucks Road and Abby Way. <b>Water Pollution Control Needs/Environmental Benefits:</b> This is a septic elimination project to continue Sussex County's efforts to serve existing developments/homes and eliminate existing septic systems.</p>											
20	2017	60	Fort DuPont Redevelopment and Preservation Corporation	Fort DuPont Canal District and Officers Row Stormwater Management Improvements	350	DE Bay & Estuary - C & D Canal East Not applicable (N/A)	\$927,000	N/A	N/A	\$927,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The project includes the installation of new storm sewer inlets, storm sewer piping and storm water management best management practices (BMPs) for an approximate 22 acre drainage area. Planned BMPs include green infrastructure practices including bioretention, gravel wetlands, dry wells and infiltrations designed and constructed in accordance with State of Delaware Sediment and Stormwater Regulations. Pollutant removal efficiencies for total nitrogen, total phosphorus, and total suspended solids range from 20% to 100% when designed in accordance with Delaware's Post Construction Stormwater BMP standards and Specifications. Subsequent to treatment, stormwater will be discharged to the Branch Canal. The Canal District and Officer's Row phase of the project in being constructed so that properties are located above and outside the areas affected by flooding and sea level rise. Therefore upland portions of new storm water management infrastructure in this phase will be protected as well.</p> <p>As part of the overall development project for this site, FDRPC is also planning multiple improvements to enhance site ecology including the following:</p> <ol style="list-style-type: none"> <li>1. Creation and restoration of wetlands along the Delaware River and on the southern areas of the site. These efforts will restore the natural tidal hydrology of the existing wetlands and remove and replace invasive species.</li> <li>2. Creation of a wetland conservation easement to protect new and restored wetlands from development.</li> <li>3. Investigation of the feasibility of shoreline improvements along the Delaware River including the removal of invasive species and installation of living shoreline components to supplement and replace hard shoreline elements.</li> <li>4. Extension of the Michael Castle Trail from its current termination point north of the Brach Canal to and around the site.</li> </ol>											
21	2017	60	New Castle County Department of Special Services	Woodside Court	200	Piedmont - Christina River Not applicable (N/A)	\$436,150	N/A	N/A	\$400,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The existing dry pond was designed in 1997 and receives approximately 5+ acres of runoff. The upstream drainage area from the residential community consists of homes, turf lawns, subdivision streets, and DeIDOT right-of-way. This project is in need of repairs due to the major amount of sediment accumulation, metal outlet pipe deterioration, and embankment erosion. These modifications will include the construction of a new concrete outlet structure and outlet barrel for extended detention, construction of a new rock forebay for sediment collection, and the enhancement of water quality through the creation of a wetland mitigation that will collect and treat portions of the drainage area for TMDL's.</p>											
22	2017	55	Fort DuPont Redevelopment and Preservation Corporation	Fort DuPont Canal District and Officers Row Sewer Improvements	350	DE Bay & Estuary - C & D Canal East NPDES DE 0021555	\$520,000	N/A	N/A	\$520,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The project includes demolition of existing gravity sewer infrastructure, installation of approximately 4,200 LF of new 8-inch gravity main, 25 new manholes, and 99 new sewer services (wyes, laterals, cleanouts). New sewer infrastructure will be connected to existing infrastructure serving the Fort DuPont site. Demolition and replacement of old sewer infrastructure is expected to reduce existing rainfall induced infiltration and inflow within the existing system. The Canal District and Officer's Row phase of the project in being constructed so that properties are located above and outside the areas affected by flooding and sea level rise. Therefore sewer infrastructure in this phase will be protected as well.</p>											

23	2017	50	Town of Smyrna	South Main Street Utility Replacement Project	2,120	DE Bay & Estuary - Smyrna River N/A	\$1,606,100	N/A	N/A	\$1,600,600	Loan / Subsidies TBD
----	------	----	----------------	---	-------	--	-------------	-----	-----	-------------	----------------------------

**Description of Project and Problem:** The Town of Smyrna is continuing its long term plan of replacing its aging utility network. The South Main Street project mainly consists of replacing undersized and failing sewer mains. The Town has continued its ongoing asset management plan by maintaining and updating a hydraulic model for the entire sewer system. The sewer system has been mapped and is updated as new infrastructure is built or existing infrastructure is replaced. Using the model, the Town has created a prioritized list of projects as part of the Capital Improvement Program. The projects are determined by analyzing anticipated capacity and failure issues. Capital needs are also estimated once a project is identified by using the model to determine the extent of the upgrades or replacement. The Town has also recently implemented best practices according to EPA's "Asset Management: A Best Practices Guide" document by addressing the 5 major questions framework. The Town acquired an Asset Management Incentive Program grant from DNREC to aid in the implementation. Both the Town's sewer rates and connection and impact fee policies have been established to build, maintain, and operate the sewer system. The sewer rates continue to provide the necessary funds for maintenance and operation of the existing system, including the rehabilitation and replacement of aging infrastructure. The connection and impact fees are utilized for extending the sewer system and future upgrades that will be needed as capacity demands increase. The South Main Street Utility Replacement Project will encompass the replacement of the existing sewer main within South Main Street between South Street and the bridge at Lake Como. The existing 8" gravity sewer main (approximately 1600 linear feet) will be replaced with new 10" PVC pipe, including the replacement of all associated manholes, cleanouts, and laterals. The sewer main is being replaced due to a history of failure and capacity issues.

24	2017	45	Fort DuPont Redevelopment and Preservation	Fort DuPont Floodproofing Improvements	1,500	DE Bay & Estuary - C & D Canal East Not applicable (N/A)	\$2,180,000	N/A	N/A	\$2,180,000	Loan / Subsidies TBD
----	------	----	--	--	-------	---	-------------	-----	-----	-------------	----------------------------

**Description of Project and Problem:** The project includes the installation of two (2) new earthen dikes. The two dikes are proposed to provide protection from storm surges from both the Delaware River side and the west side of the property. The longer of the two dikes is located along the Delaware River shoreline, and is approximately 4,000 feet in length. It will be located 100 to 500 feet landward from the current Delaware River shoreline, outside the designated limit of moderate wave action (the limit of damaging wave action as mapped by FEMA). The riverside face of the dike will be partially lined with riprap revetment. FDRPC is also investigating the feasibility of shoreline improvements along the Delaware River including the removal of invasive species and installation of living shoreline components to supplement and replace hard shoreline elements. The second dike is located on the west side of the property, and runs generally parallel to the Reedy Point Bridge and Route 9. The "bridgeside" dike is approximately 2,500 feet in length. Both dikes will be approximately seven to nine feet above existing ground elevation and have side slopes of 3:1 to 4:1 (horizontal to vertical). A future extension of the Castle Trail is planned to be located on top of the dikes. Both dikes will be keyed into the existing North Reedy Point stockpile, which is owned and maintained by the Army Corps of Engineers on the south side of Fort DuPont. The dikes will taper into proposed fill in the Canal and Marina Districts on the north side of the site. A short section of Route 9 will be raised in elevation to provide flood protection and act as the northwest terminus of the bridge-side dike. A storm drain pump station will be necessary to pump storm water collected within the bowl created by the dikes through the river-side dike. Impacts to tidal and non-tidal wetlands areas will be minimized and disturbances mitigated. Mitigation will include creation and restoration of wetlands along the Delaware River and on the southern areas of the site. These efforts will restore the natural tidal hydrology of the existing wetlands and remove and replace invasive species. New and restored wetlands will be protected with a planned conservation easement. The dikes will serve to protect existing infrastructure, historical resources, and site amenities.

25	2017	45	City of Lewes BPW	Abbott Park Sewer Improvements	60	Inland Bays - Rehoboth Bay DE 0021512	\$155,000	N/A	N/A	\$155,000	Loan / Subsidies TBD
----	------	----	-------------------	--------------------------------	----	--	-----------	-----	-----	-----------	----------------------------

**Description of Project and Problem:** The project will install 680-feet of 8-inch PVC sanitary sewer main, six (6) manholes, three (3) terminal sewer cleanouts at ends of sewer mains, and approximately 750-feet of 6-inch house service piping and cleanouts for each of the twenty (20) mobile home sites. Thus, the project will provide the existing subdivision of Abbott Park with a new sanitary sewer collection system to replace their existing, aging, system that is located outside the subdivision roadway under mobile homes and through grass alleyways. The new sewer mains will be installed within the subdivision roadway for ease of maintenance and access. The new system will include manholes and terminal cleanouts to modernize the subdivision's wastewater collection system. New house services will be part of the project connecting into existing service points at each mobile home unit. The new collection system will be part of the existing Lewes Board of Public Works Wastewater Collection and Treatment System, and improve collection at twenty (20) existing mobile home units. The proposed system would include a gravity collection system with connection to the Board's existing collection system on Washington Avenue.

26	2017	44	Sussex County Council	Bethany Forest	326	Inland Bays - Indian River NPDES-005-0008	\$2,452,154	N/A	N/A	\$2,452,154	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> Install a gravity collection and conveyance system to serve the existing Bethany Forest Subdivision, a community in the Millville Planning Area requesting a County run sewer system. This project will eliminate 93 septic systems. Water Pollution Control Needs/Environmental Benefits: This is a septic elimination project to continue Sussex County's efforts to serve existing communities/homes and eliminate existing septic systems.</p>											
27	2017	43	Sussex County Council	Mulberry Knoll	280	Inland Bays - Rehoboth Bay WPCC-3042C-90 (Spray Irrigation)	\$2,813,062	N/A	N/A	\$2,813,062	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> This project consists of a gravity collection system, sub-regional pump station &amp; force main to our regional pump station to serve the area known as Mulberry Knoll. The area is a peninsula in the Rehoboth Bay and the wastewater will be pumped to the County's Inland Bays Regional Wastewater Facility for treatment &amp; disposal. The area will require annexation into the county sewer district. This project will eliminate 80 septic systems and prevent 8 from being installed. Water Pollution Control Needs/Environmental Benefits: This is a septic elimination project to continue Sussex County's efforts to serve existing development/homes with a central sewer system and to eliminate existing septic systems.</p>											
28	2017	42	Sussex County Council	Oak Acres	193	Inland Bays - Little Assawoman NPDES-005-0008	\$2,500,000	N/A	N/A	\$2,500,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> Install a gravity collection &amp; conveyance system to serve the existing subdivision of Oak Acres, a community in the Miller Creek Sanitary Sewer District with a history of failing septic systems. This project will eliminate 43 septic systems and prevent 12 from being installed. Water Pollution Control Needs/Environmental Benefits: This is a septic elimination project to continue Sussex County's efforts to serve existing developments/homes and eliminate existing septic systems.</p>											
29	2017	41	Sussex County Council	Mallard Creek	133	Inland Bays - Little Assawoman NPDES-005-0008	\$2,000,000	N/A	N/A	\$2,000,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> Install a gravity collection and conveyance system including a new pumpstation and forcemain to serve the existing Mallard Creek Subdivision, a community in the Holt's Landing Planning Area that has been polled for their interest in being included in a County run sewer system. This will remove approximately 38 existing on-site septic systems. Water Pollution Control Needs/Environmental Benefits: This is a septic elimination project to continue Sussex County's efforts to serve existing communities/homes and eliminate existing septic systems.</p>											
30	2017	41	Sussex County Council	Tanglewood	70	Inland Bays - Little Assawoman NPDES-005-0008	\$1,400,000	N/A	N/A	\$1,400,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> Install a gravity collection &amp; conveyance system to serve a subdivision in the Miller Creek Sanitary Sewer District known as Tanglewood, per the request of property owners. This project will eliminate 9 septic systems and prevent 11 from being installed. Water Pollution Control Needs/Environmental Benefits: This is a septic elimination project to continue Sussex County's efforts to serve existing developments/homes and eliminate existing septic systems.</p>											

31	2017	40	Delaware City	Washington Street Flood Mitigation	350	DE Bay & Estuary - C & D Canal East N/A	\$790,000	N/A	N/A	\$790,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The project to address flooding concerns near Washington Street and the water front began in 2013. Delaware City was awarded two grants totaling \$880,000 from DEMA (seeded by FEMA) and the New Castle Conservation District in the amounts of \$690,000 and \$190,000, respectively. Additionally, records indicate that Delaware City was to contribute \$40,000 for a total starting budget of \$920,000. The project was bid in 2016 and for which the bids received exceeded the available funding. Therefore, the project was decided to be phased and the City approached the CWSRF to fund the second phase. These components of the project are as follows:</p> <p>a. OUTFALL: "The first component of the proposed mitigation project is to retrofit and upgrade the existing outfall to limit potential for intrusion of tidally induced groundwater into the terminal end of Washington Street."</p> <p>b. DRAINAGE SYSTEM: "The second component of the proposed mitigation project includes improvements to the interior drainage systems along Washington Street. .. "</p> <p>c. PUMP STATION: "The third component ... includes the design and installation of a reliable and robust pumping system . . . to drawdown accumulated stormwater and remnant tidal water infiltration."</p> <p>The City's pre-application for Mitigation Grant Funding submitted to DEMA by letter dated February 15, 2013 described "the goal of the proposed mitigation project is to protect the downtown historic district of Delaware City from flood level up to the FEMA determined 100-year flood.". As documented by letter dated October 15, 2013 from the consultant to DEMA, "the proposed project will provide protection to the affected homes to an elevation of "9" or greater based on the NAVO 1988 Datum."</p>											
32	2017	40	New Castle County Department of Special Services	Mill Creek Sanitary Sewer Point Repair Project	6,050	Piedmont - White Clay Creek N/A	\$1,443,330	N/A	N/A	\$1,300,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> New Castle County has requested funding for the project known as the Mill Creek Sanitary Sewer Point Repair Project. Based on results of the Mill Creek Sewershed Sewer System Evaluation Survey (SSES) Report in 2015, a portion of the Mill Creek sewers have been identified as having structural defects. Due to the severity of the structural defects found within 25 of the pipe segments, point repair dig and replace methodology for rehabilitation has been selected. The report as further evaluated the sewers in this area and determined that there are no capacity constraints in this portion of the Mill Creek system. Therefore, no increase in pipe diameters are required. This evaluation included temporary flow monitoring, hydraulic model, alternatives evaluation, smoke testing, CCTV inspections, and manhole inspections.</p> <p>Based on the results of the previous tasks, preliminary plans (30%) have been developed that illustrate the rehabilitation requirements essential to restore the integrity of the sanitary sewer. The final design for this project will be completed by December 2017, with bid documents ready in the first quarter of 2018.</p>											
33	2017	35	New Castle County Department of Special Services	2016 Sanitary Sewer Rehabilitation Project	630	Piedmont - Christina River N/A	\$1,165,000	N/A	N/A	\$1,105,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The 2016 Sanitary Sewer Rehabilitation Project is a continuation of the County's long-term plan to address its aging sewer system. The County proactively inspects the sewer system to identify needed rehabilitation and repairs. Through the inspection efforts, the County has identified needed point repairs and pipe rehabilitation. The 2016 Sanitary Sewer Rehabilitation Project includes five point repairs and one manhole replacement at five different locations within the county. The repairs will generally consist of any required maintenance of traffic, excavation, pipe or manhole replacement, and the required restoration. In total, approximately 100 linear feet of 8" vitrified clay pipe will be replaced.</p>											

34	2017	30	Kent County Levy Court Department of Public Works	US Route 13 Forcemain Rehabilitation	130,000	DE Bay & Estuary - Murderkill River NPDES DE 0020338	\$3,980,000	N/A	N/A	\$3,980,000	Loan / Subsidies TBD
<p><u>Description of Project and Problem:</u> The Department of Public Works is proposing a rehabilitation project for a sanitary sewer pipeline in the median of US Route 13 (US 13) in the north Dover area. See attached map. The 1970's era pipeline in need of rehabilitation is a 24" PCCP transmission line which conveys sanitary sewer flows from northern Kent County through the City of Dover to the Kent County Regional Resource Recovery Facility which is located north of Milford, DE. The portion of transmission line, located in the median of US 13 at the north end of Dover, has experienced two significant breaks within the past 3 years. Closed Circuit Television (CCTV) inspection of the pipe prior to the sliplining repair near US 13 and Rustic Lane revealed that much of the transmission line has deteriorated. The crown deterioration viewed in the inspection indicates pipe exposure to the sewer gases associated with the age of the pipe. After the sliplining was completed in 2016, a second break near KW Boulevard occurred just north of the repair. This forcemain represents a critical component of the overall sanitary sewer system. The long term sustainability of the overall system is dependent upon the continued use of this asset to convey flow from Pump Station 2 (Denneys Rd) and northern Kent County. To ensure this asset remains viable, a significant renewal or replacement project is required. In addition to providing reliable sanitary sewer service, maintaining the forcemain in good condition reduces the potential for future breaks. Breaks have significant negative impacts to nearby assets such as roadways, dry utilities, as well as potential environmental, health and safety impacts to the surrounding area.</p>											
35	2017	30	New Castle County Department of Special Services	Mt. Pleasant Interceptor	10,000	Piedmont - Christina River N/A	\$4,768,000	N/A	N/A	\$4,500,000	Loan / Subsidies TBD
<p><u>Description of Project and Problem:</u> New Castle County requesting funding for the project known as the Mt. Pleasant Sanitary Sewer Interceptor. Based on results submitted by our engineer, a portion of the Southern Sewer Interceptor System should be extended from the Cedar Lane Intersection west to the Mt. Pleasant Intersection. This portion was planned in 2004, but the design was not completed and construction did not start due to a lack of need at that time. This extension will allow development which is now planned in this area, eliminating the need for on-site septic systems and reduce the risk of violating the Clean Water Act. Extension of the interceptor is required in order to support potential future development in this area of the Southern Sewer Service Area. The County originally planned this project in 2004 to be part of the Southern Sewer System. It was partially designed but was stopped prior to final design. It was determined to not be needed during that period so it was delayed until now. The County is now seeking full design phase for bid documents and construction to expand the Southern Sewer System to allow development planned in the area. We estimate our planning for this project will be completed by September 2017. Full design will be completed by April 2018.</p>											

36	2017	20	DNREC, Division of Watershed Stewardship	Middle Island Dredge Replacement Site	N/A	Inland Bays - Indian River	\$4,000,000	N/A	N/A	\$4,000,000	Loan / Subsidies TBD
<p><u>Description of Project and Problem:</u> The project will involve performing maintenance dredging in the federal navigation channel in Massey's Ditch, between Rehoboth Bay and Indian River Bay, in Sussex County, Delaware. The channel will be dredged to the federally authorized channel dimensions: length - 14,400 feet; width - 100 feet; depth - 6 feet below Mean Low Water. Approximately 50,000 cubic yards of material will be dredged from the channel as part of this project. Excavated material will be beneficially placed in an aquatic containment site that will be constructed near the south end of the channel immediately adjacent to Middle Island. The site will be constructed using a combination of rip-rap and geo-tubes. Middle Island was approximately 11 acres in size about 80 years ago. The island has eroded to approximately 4 acres in size. The containment site is designed to recreate the original footprint of the island. Additional components of this beneficial use of dredged material project is to improve the shorebird rookery that currently exists on the island and construct wetlands within the containment site to provide for more diversified habitat. The project will result in the restoration of an eroded island and provide for improved and diversified habitat for shorebirds and benthic resources. This project will be implemented in accordance with the Delaware Inland Bays Comprehensive Conservation and Management Plan 1995 (Chapter 3, Tactic G). It will be carried out following the policies of the Inland Bays Dredge Plan (2002):</p> <ul style="list-style-type: none"> <li>• Remove sediment loads that are slowly filling in the Bays;</li> <li>• Minimize dredging to only that which is necessary to achieve a desired objective;</li> <li>• Will protect valuable and functioning habitats while providing for improved and more diversified habitats; and</li> <li>• Will be subjected to the most current methods of evaluating natural resource impacts</li> </ul>											
<b>Sub-Total FY 2017 Waste water</b>							<b>\$97,075,761</b>			<b>\$89,461,649</b>	

FY 2017 CWSRF GPR Projects (*The Percentage of the Project that is Energy Efficient will be determined after receipt of application)											
1	2016	90	City of Wilmington	South Wilmington Wetlands Park	70,000	Piedmont - Christina River DE0020320	\$16,739,000	Green Infrastructure	Yes	\$16,739,000	Loan / Subsidies TBD
<p><b>Description of Project and Problem:</b> The purpose of the South Wilmington Wetlands Park (SWWP) is to restore and enhance wetlands, create a stormwater management facility, and create a passive park open space destination. The objectives of the project are to:</p> <ul style="list-style-type: none"> <li>• Reduce flooding events and associated flood impacts in the historic Southbridge neighborhood;</li> <li>• Reduce Combined Sewer Overflow (CSO) discharges to the Christina River and unintended CSO discharges to the Southbridge neighborhood;</li> <li>• Increase resiliency to future storms and sea level rise;</li> <li>• Improve wetland ecological services and accessibility;</li> <li>• Improve water quality in the Christina River; and,</li> <li>• Stimulate economic development in South Wilmington.</li> </ul> <p>The SWWP was conceived and developed in cooperation with the Delaware Department of Natural Resources and Environmental Control (DNREC) and the surrounding community as part of the National Oceanic and Atmospheric Administration (NOAA) funded 2006 South Wilmington Special Area Management Plan (SAMP). The concept of the SWWP was later integrated into the South Walnut Urban Renewal Plan, a comprehensive land use planning document adopted by Wilmington City Council in 2009. Since that time, the City of Wilmington, DNREC and the Wilmington Area Planning Council have been working with the Southbridge community to develop a park that incorporates community feedback to address ongoing issues of flooding and contamination while increasing local walkability and recreational opportunities. The SWWP will provide flood relief to the Southbridge neighborhood, and ecological uplift through wetland enhancement and restoration. The project consists of invasive species control, soil grading, tidal connectivity modifications, and planting to enhance tidal exchange, improve wetland hydrology, and increase the waters-wetland edge and establish a desirable plant community throughout the site. The restoration of the site will also require the excavation and remediation of contaminated soil which date to the site's industrial past. Restoring the area to a high functioning tidal wetland system dominated by native species will dramatically increase the wildlife habitat potential and aesthetic value of the area. In addition, the restored wetland will accept, store and attenuate flood waters that presently flow to a combined stormwater/sanitary sewer system that frequently overflows and floods the Southbridge community. The separation of the storm and sanitary sewers in Southbridge and diversion of stormwater to the SWWP will directly benefit over 1,000 residents of the Southbridge community by reducing flooding frequency in addition to increasing available storm capacity. To meet the green project reserve definition, the project includes the green infrastructure features:</p> <ul style="list-style-type: none"> <li>• Management of wet weather conditions and maintenance and restoration of natural hydrology by infiltrating and evapotranspiring stormwater; and,</li> <li>• Preservation and restoration of natural landscape features, such as forests, floodplains and wetlands.</li> </ul>											

2	2017	80	City of Wilmington	15th and Walnut CSO Separation, Green Infrastructure Installation, and Bicycle Pump Track	70,000	Piedmont - Christina River DE0020320	\$820,000	Green Infrastructure	N/A	\$700,000	Loan / Subsidies TBD
<p><u>Description of Project and Problem:</u> The purpose of the 15th and Walnut Green Stormwater Infrastructure project is improve water quality in the Wilmington watershed by separating stormwater runoff from Combined Sewer Flow (CSO) in two recently built housing projects and one block of Walnut Street within the City of Wilmington. The project will then route the runoff through green infrastructure BMP's to capture the first 2 inches of precipitation using a combination of rain gardens, tree trenches, and bioswales to reduce the quantity and improve the quality of the stormwater prior to discharging into the nearby Brandywine Creek. In the current and previous condition, parcels stormwater flow was discharged by the City's combined sewer overflow collection system. The project will incorporate into the construction a park-like amenity in the form of a bicycle pump track that will reinforce the mission of the Non-profit organization, The Urban Bike Project. The overall project will allow for community outreach both in support of the an economically disadvantaged area. The objectives of the project are to:</p> <ul style="list-style-type: none"> <li>• Remove stormwater from the City's CSO system, reducing Combined Sewer Overflow (CSO) discharges into the Brandywine creek;</li> <li>• Mitigate both the quantity and quality of stormwater discharged to the Brandywine River;</li> <li>• Create a greenspace that will benefit the local community and the surrounding communities, and;</li> <li>• Reinforce the mission and outreach of The Urban Bike Project by creating a recreational opportunity that will draw users, volunteers and resources specific to the needs of the non-profit organization.</li> </ul>
