Provide positive drainage to sediment trapping device

Plan

Profile

Section A-A (Std.)
Construction Notes:

1. **Stone size** - Use DE #3 stone.

2. **Length** - As required, but not less than 50 feet (except on a single residence lot where a 30 foot minimum length would apply).

3. **Thickness** - Not less than size (6) inches.

4. **Width** - Ten (10) foot minimum, but not less than the full width at points where ingress or egress occurs.

5. **Geotextile** - Type GS-I; placed over the entire area prior to placing of stone.

6. **Surface Water** - All surface water flowing or diverted toward construction entrances shall be piped across the entrance. If piping is impractical, a mountable berm with 5:1 slopes will be permitted.

7. **Maintenance** - The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights-of-way. This may require periodic top dressing with additional stone as conditions demand and repair and/or cleanout of any measures used to trap sediment. All sediment spilled, dropped, washed or tracked onto public rights-of-way must be removed immediately.

8. **Washing** - Vehicle wheels shall be cleaned to remove sediment prior to entrance onto public rights-of-way. When washing is required, it shall be done on an area stabilized with stone and which drains into an approved sediment trapping device.

9. **Inspection** - Periodic inspection and needed maintenance shall be provided after each rain.
