

State Revolving Fund

The purpose of the Nonpoint Source Loan Program (NPSLP) is to provide a source of low interest financing to manage sources of NPS pollution in an environmentally sound and cost effective manner. The loans are made under a provision of the Delaware Pollution Control Revolving Fund. Establishing the NPS Loan Program was a goal identified in Delaware's Nonpoint Source Pollution Management Plan approved by EPA.

Until recently the (NPSLP) was only available to farmers for the installation of agricultural BMP's. However, on November 14, 2002 EPA approved Delaware's expanded use component of the (NPSLP). The expansion will allow private landowners, homeowner associations, corporations, municipalities, government agencies, non-profit organizations, and estuary programs to obtain SRF financing for the implementation of NPS initiatives that support goals and objectives identified in Delaware's NPS Management Plan. It is an important tool to help the state abate nonpoint source (NPS) pollution and achieve water quality goals. Goals addressed in Delaware's Nonpoint Source Management Plan include the need to reduce nutrients and sediments from agricultural and urban land uses.
