Re: Follow-up To Deficiency Response Letter of November 19, 2009
Compliance Sampling & Inspection (CSI) – September 22, 2009
NPDES Permit No. DE-0000736

Dear Mr. Spence:

I received the follow-up response letter from Mr. Lynch regarding the deficiencies and recommendations from the September 22, 2009 CSI by our Mr. Allen McCloskey – Senior Environmental Compliance Specialist.

I am pleased to know that a permanent sign has been placed at the Storm Water Outfall 006. The Sludge Inventory spreadsheet is a great start to the information necessary to satisfy the requirements of Part III, A 6 of your NPDES Permit No. 0000736 Special Conditions, however, additional data must be entered to comply with this section of your NPDES permit. Specifically, the data must include quantity of sludge generated, quantity stored on site, and quantity transported off site. Additionally, you must include transportation records that include data on date, quantity, carrier used, and the final destination for each shipment.

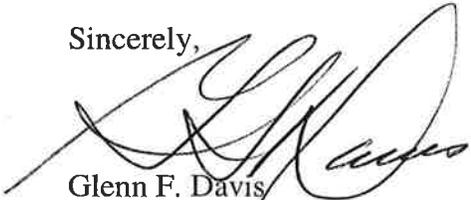

The sampler calibration log sheet is not sufficient to properly document that the sample aliquot volume is consistent and verified. The recommended monthly check documentation must show the sample volumes checked, the average volume, and a pass/fail for the volume calibration check. I have attached a sample of an acceptable documentation sheet to be used for this sample aliquot volume check. Please feel free to use this example of some other type of documented evidence that the volume was checked and is accurate.

Delaware's good nature depends on you!
